## DESCRIPTION

MaxAlloy™ aluminum indoor coils are specially designed to be installed with UPG furnaces or modular air handlers as part of a matched air conditioning or heat pump system.

UPG indoor coils can be applied with indoor orifices and/or TXVs according to the application. Most indoor coil models are available as “flex” coils for installation of the specific expansion device in the field. Select SKUs are available with factory-mounted TXVs or EEVs. Refer to the Technical Guide for the matched outdoor unit to determine the required indoor expansion device for your specific application.

**CF** series full cased coils are suitable for upflow or downflow applications.

**CM** series full cased coils have the added flexibility of multi-position installation. They are shipped as upflow / horizontal left and are easily convertible to downflow / horizontal right. Select CM Models are available with a factory manufactured electronic expansion valve.

**CU** series uncased coils are designed for upflow-only applications on top of furnaces. These coils may require field modification of the ductwork. A Partial Case accessory is also available, as shown on the accessories page.

If CF or CM coils are installed without the casing, a Diverter Shroud kit is required, as shown on the accessories page. CU coils include a factory-installed Diverter Shroud.

## FEATURES

**Rigid Case Construction** - an interior endoskeleton provides structural support eliminating screw heads protruding from the side of the cabinet that could damage property when being installed.

**Cabinet** – Constructed of heavy gauge galvanized steel with a primer and finish coat providing a high quality corrosion resistant finish.

**MaxAlloy™ Coil** - Long life aluminum coils built to deliver lasting performance, efficiency and reliability.

**Foil faced insulation** -The cabinet is insulated with a single piece of cleanable foil faced insulation retained by the endoskeleton. The cabinet design is such that all edges of the insulation are contained.

**Electronic Expansion Valve (EEV)** - Factory installed on select CM models and sized to match with specific high-efficiency variable capacity outdoor units.

**Compact Cabinet** - With the coil and access doors removed the cabinet has a 20.5” casing depth in all models, which provide ease of attic access and space constrained applications.

**Thermoset Drain Pan** - Corrosion and UV resistant with a positive slope for proper drainage. Low water retention design maximizes indoor air quality and consumer comfort.

**Low Leakage Cabinet Design** - Fully gasketed doors minimizes air leakage to no more than 2% when measured at 1.0” esp. minimizing conditioned air leakage and infiltration.

**Duct Flange** - Three sided duct flange is supplied to be field installed when required.

**Thermostatic Expansion Valves**-Select factory mounted as well as field mounted models available utilizing chatleff fittings, no brazing required.

**ACCESSORIES**

Refer to Price Manual for specific model numbers.

**TXV Kits** - Thermal expansion valve kits are available for flex coil applications with R-410A or R-407C refrigerant. All TXV kits are non-braze, bolt-on connections including the valve assembly and equalizer tube. No orifice or any other metering device is to be used in conjunction with the TXV.

**Partial Case** - Available to be used with CU coils in four widths. This option is intended for upflow applications where height limitations prevent the installation of full cased coils. The Partial Case design allows the top section of the indoor coil to be installed in the duct or plenum.

**Coil Casing Without Coil** - Coilless Cases are available in four widths that can be installed with the furnace or modular air handler during initial installation. This option is available to allow the installer the flexibility to add the coil at a later date without duct modifications.

1. See Condensing Unit or Heat Pump Technical Guide for Total Cooling Capacity and Sensible Capacity.

**APPLICATION FACTOR-RATED CFM VS. ACTUAL CFM**

% Of Rated Air Flow (CFM)*	80%	90%	100%	110%	120%
Capacity Factor	0.96	0.98	1	1.02	1.03

\*Do not exceed minimum/maximum CFM limits shown under Air Flow Data.

**APPLICATION LIMITATIONS**

These units must be installed in accordance with all national and local safety codes.

Air flow must be within the minimum and maximum limits approved for electric heat, indoor coils and outdoor units.

1. Dry coil conditions only, tested without filters.

For optimal performance, external static pressures of 0.2" to 0.5" are recommended. Applications above 0.5" are not recommended.

1. Dry coil conditions only, tested without filters.

For optimal performance, external static pressures of 0.2" to 0.5" are recommended. Applications above 0.5" are not recommended.
