Doing Our Part to Create a Better Future for All...

Core Environmental Policy

The Mitsubishi Electric Group promotes sustainable development and is committed to protecting and restoring the global environment through technology, all business activities and the actions of our employees.

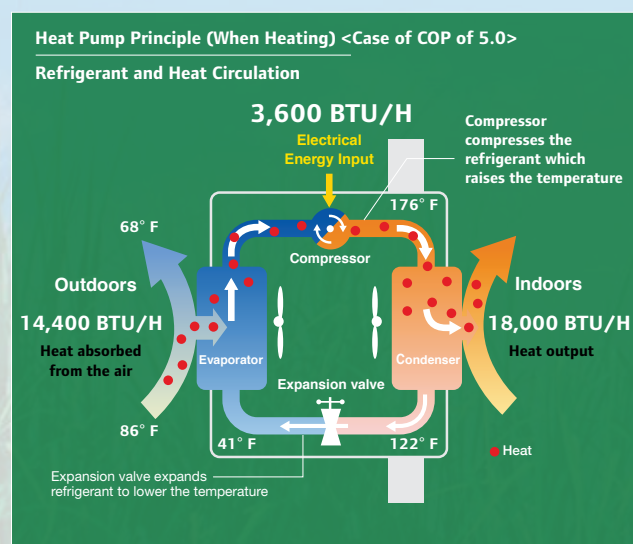

Mitsubishi Electric reflects the essence of this policy and vision in all aspects of its air conditioner business.

Preventing Global Warming

Heat pump technology inspires Mitsubishi Electric to design air conditioners that combine comfort and ecology.

Mitsubishi Electric develops technologies to balance comfort and ecology, achieving greater efficiency in heat pump operation.

	Comfort	Ecology
1. Inverter	Faster start-up and more stable indoor temperature than non-inverter units.	Fewer On/Off operations than with non-inverter saving energy.
2. 3D i-see Sensor*	Since the position of people can be detected, airflow can be set to personal selection, such as direct airflow path. The ability to adjust to individual preferences results in more comfortable air conditioning.	Since the number of people in a room can be detected, energy-saving operation is adjusted or the power is turned off automatically. Efficient air conditioning with less waste is realized.
3. Flash Injection	Achieves high heating capacity even at low temperatures plus faster start-up compared to conventional inverters.	Expands the geographical region covered by heat pump heating systems.

Nv-Series Model Reference Guide

- Designed for residential applications
- User-friendly zoned cooling and heating solutions for single- or multi-room applications or the whole home
- Pro-Heat INVERTER-driven outdoor units can provide high heating performance at lower ambient temperatures
- Many ENERGY STAR® certified models

P-Series Model Reference Guide

- Designed for light commercial installations. Ideal for applications requiring year-round, low ambient cooling such as computer, elevator and equipment rooms
- Pro-Heat outdoor units can provide superior heating performance at lower ambient temperatures
- Long lineset lengths
- Outside air intake on PLA, PCA, PEAD and PVA models
- P-Series ducted units have higher static than most Nv-Series, allowing for design flexibility

QUALITY AND TESTING

Quality First. Always.

Cutting-edge technologies and uncompromising commitment to quality and reliability have made us one of the world's most trusted brands in air-conditioning and refrigeration equipment and service.

DEVELOPMENT

Operating Tests in Harsh Conditions

Harsh environmental conditions of cold regions are simulated for the development of our air conditioners. This is another reason customers in severely cold regions rely on us for comfortable heating.

Combustion Test

Products are subjected to a wide range of tests including combustion testing, all to confirm safe operation under a variety of conditions. Combustion testing is done by assuming accidental firing and replicating abnormal conditions that cause breakage of pressure components.

Explosion-proof chamber

Shock Resistance

On the assumption of many different kinds of logistics environments in the world, we perform drop/strength tests, transport vibration tests, and many other product checks to assure that the quality and performance are maintained when the product reaches the user's home.

Drop/strength testing

Transport vibration testing

Waterproof and Corrosion Test

Since the outdoor unit is subject to rain, wind, and corrosive substances, potential problems are checked by tests such as showering the unit for a certain amount of time and increasing protection to enhance the lifespan of the unit.

Operation Noise Test

Operation noise tests are performed in an anechoic chamber with an extremely low 10dB(A) of background noise. This is just one of the ways we ensure our customers enjoy extremely quiet air conditioners with a minimum operation noise of 19dB(A) (sound pressure level).

Anechoic chamber

DESIGN

Designed to create and maintain a comfortable environment

To improve the quality of products, engineers strive to achieve our philosophy of combining comfort and ecology in an effort to continually raise the bar. Therefore, we are working to further improve quality at all stages from development to production.

PRODUCTION

Each and every unit is checked and double-checked by experienced professionals

Every air conditioner goes through a rigorous electrical inspection on the manufacturing line. In final testing, our experienced inspectors listen for even the faintest operation noise to detect any defect.

INVERTER TECHNOLOGIES

Our Promise: Mitsubishi Electric inverters ensure superior performance including the optimum control of operation frequency. As a result, optimum power is applied in all heating/cooling ranges and maximum comfort is achieved while consuming minimal energy. Fast, comfortable operation and amazingly low running cost — that's the Mitsubishi Electric promise.

INVERTERS – HOW THEY WORK

Inverters electronically control the electrical voltage, current and frequency of electrical devices such as the compressor motor in an air conditioner. They receive information from sensors monitoring operating conditions, and adjust the revolution speed of the compressor, which directly regulates air conditioner output. Optimum control of operation frequency results in eliminating the consumption of excessive electricity and providing the most comfortable room environment.

ECONOMIC OPERATION

Impressively low operating cost is a key advantage of inverter air conditioners. We've combined advanced inverter technologies with cutting-edge electronics and mechanical technologies to achieve a synergistic effect that enables improvements in heating/cooling performance efficiency. Better performance and lower energy consumption are the result.

TRUE COMFORT

Below is a comparison of air conditioner operation control with and without an inverter.

■ Inverter operation comparison

The compressors of air conditioners without an inverter start and stop repeatedly in order to maintain the pre-set room temperature. This repetitive on/off operation uses excessive electricity and compromises room comfort. The compressors of air conditioners equipped with an inverter run continuously; the inverter quickly optimizing the operating frequency according to changes in room temperature. This ensures energy-efficient operation and a more comfortable room.

POINT 1 Quick & Powerful

Increasing the compressor motor speed by controlling the operation frequency ensures powerful output at start-up, brings the room temperature to the comfort zone faster than units not equipped with an inverter. Hot rooms are cooled, and cold rooms are heated faster and more efficiently.

POINT 2 Room Temperature Maintained

The compressor motor operating frequency and the change of room temperature are monitored to calculate the most efficient waveform to maintain the room temperature in the comfort zone. This eliminates the large temperature swings common with non-inverter systems, and guarantees a pleasant, comfortable environment.

KEY TECHNOLOGIES

Our Rotary Compressor

Our rotary compressors use our original Poki-Poki Motor and Heat Caulking Fixing Method to realize downsizing and higher efficiency, and are designed to match various usage scenes in residential and commercial applications. Additionally, development of an innovative production method known as "Divisible Middle Plate" realizes further size/weight reductions and increased capacity while also answering energy-efficiency needs.

Our Scroll Compressor

Our scroll compressors are equipped with an advanced frame compliance mechanism that allows self-adjustment of the position of the orbiting scroll according to pressure load and the accuracy of the fixed scroll position. This minimizes gas leakage in the scroll compression chamber, maintains cooling capacity and reduces power loss.

MORE ADVANTAGES WITH OUR PRODUCTS

Joint Lap DC Motor

Mitsubishi Electric has developed a unique motor, called the Poki-Poki Motor in Japan, which is manufactured using a joint lapping technique. This innovative motor operates based on a high-density, high-magnetic force, leading to extremely high efficiency and reliability.

Magnetic Flux Vector Sine Wave Drive

This drive device is actually a microprocessor that converts the compressor motor's electrical current waveform from a conventional waveform to a sine wave (180° conduction) to achieve higher efficiency by raising the motor winding utilization ratio and reducing energy loss.

Reluctance DC Rotary Compressor

Powerful neodymium magnets are used in the rotor of the reluctance DC motor. More efficient operation is realized by strong magnetic and reluctance torques produced by the magnets.

Highly Efficient DC Scroll Compressor

Higher efficiency has been achieved by adding a frame compliance mechanism to the DC scroll compressor. The mechanism allows movement in the axial direction of the frame supporting the cradle scroll, thereby greatly reducing leakage and friction loss, and ensuring extremely high efficiency at all speeds.

Heat Caulking Fixing Method

To fix internal parts in place, a Heat Caulking Fixing Method is used, replacing the former arc spot welding method. Distortion of internal parts is reduced, realizing higher efficiency.

DC Fan Motor

A highly efficient DC motor drives the fan of the outdoor unit. Efficiency is much higher than an equivalent AC motor.

Vector-Wave Eco Inverter

This inverter monitors the varying compressor motor frequency and creates the most efficient waveform for the motor speed. As a result, operating efficiency in all speed ranges is improved, less power is used and annual electricity cost is reduced.

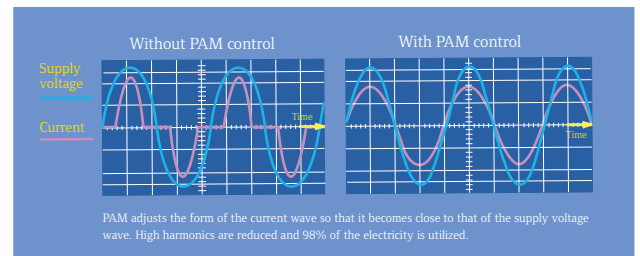

Smooth wave pattern

Inverter size has been reduced using insert-molding, where the circuit pattern is molded into the synthetic resin. To ensure quiet operation, soft PWM control is used to prevent the metallic whine associated with conventional inverters.

PAM (Pulse Amplitude Modulation)

PAM is a technology that controls the current waveform so that it resembles the supply voltage wave, thereby reducing loss and realizing more efficient use of electricity. Using PAM control, 98% of the input power supply is used effectively.

Merits of PAM Control

Power Receiver and Twin LEV Control

Mitsubishi Electric has developed a power receiver and twin linear expansion valves (LEVs) circuit that optimize compressor performance. This technology ensures optimum control in response to operating waveform and outdoor temperature. Operating efficiency has been enhanced by tailoring the system to the characteristics of R410A refrigerant.

Grooved Piping

High-performance grooved piping is used in heat exchangers to increase the heat exchange area.

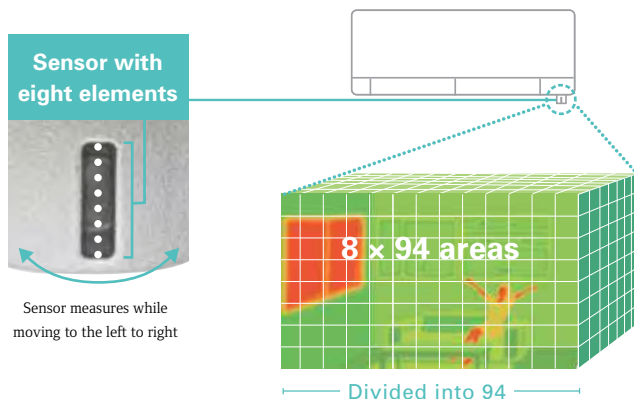

FEATURES

3D i-see Sensor®

3D i-see Sensor for Nv-Series

The WPH Model is equipped with 3D i-see Sensor®, an infrared-ray Sensor that measures the temperature at distant positions. While moving to the left and right, eight vertically arranged Sensor elements analyze the room temperature in three dimensions. This detailed analysis makes it possible to judge where people are in the room, thus allowing creation of features such as Indirect Airflow, to avoid airflow hitting people directly, and Direct Airflow to deliver airflow to where people are located in the space.

Indirect Airflow

The Indirect Airflow setting can be used when the flow of air feels too strong or direct. For example, it can be used during cooling to avert airflow and prevent body temperature from becoming excessively cooled.

Direct Airflow

This setting can be used to directly target airflow at people such as for immediate comfort when coming indoors on a hot (cold) day.

Absence Detection

The Sensors detect whether there are people in the room. When no-one is in the room the unit automatically switches to energy-saving mode.

The 3D i-see Sensor detects people's absence and the power consumption is automatically reduced approximately 10% after 10 minutes and 20% after 60 minutes.

3D i-see Sensor for CKS and PLA Models

Detects number of people

The 3D i-see Sensor detects the number of people in the room and adjusts the power accordingly. This makes automatic power-saving operation possible in places where the number of people changes frequently. Additionally, when the area is continuously unoccupied, the system switches to a more enhanced power-saving mode. Depending on the setting, it can also stop the operation.

Detects number of people

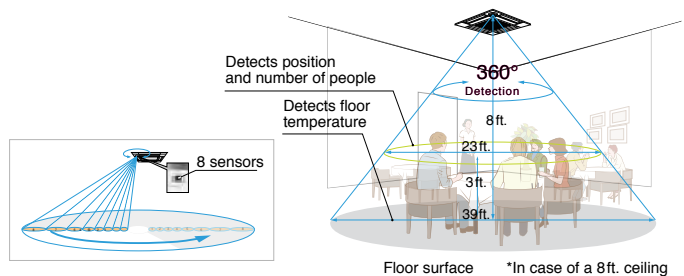

Detects people's position

Detects people's position

Once a person is detected, the angle of the vane is automatically adjusted. Each vane can be independently set to Direct Airflow or Indirect Airflow according to preference.

Highly accurate people detection

A total of eight Sensors rotate a full 360° in 3-minute intervals. In addition to detecting human body temperature, our original algorithm also detects people's positions and the number of people in the space.

Detects number of people

Room occupancy energy-saving mode

The 3D i-see Sensor detects the number of people in the room. It then calculates the occupancy rate based on the maximum number of people in the room up to that point in time in order to save air-conditioning power. When the occupancy rate is approximately 30%, air-conditioning power equivalent to 2° F during both cooling and heating operation is saved. The temperature is controlled according to the number of people.

No occupancy energy-saving mode

When 3D i-see Sensor detects that no one is in the room, the system is switched to a pre-set power-saving mode. If the room remains unoccupied for more than 60 min, air-conditioning power equivalent to 4° F during both cooling and heating operation is saved. This contributes to preventing waste in terms of heating and cooling.

No occupancy Auto-OFF mode

When the room remains unoccupied for a pre-set period of time, the air conditioner turns off automatically, thereby providing even greater power savings. The time until operation is stopped can be set in intervals of 10 min, ranging from 60 to 180 min.

Detects people's position

Direct/Indirect settings*

The horizontal airflow spreads across the ceiling. When set to Indirect Airflow that uncomfortable drafty-feeling is eliminated completely!

*TAR-40MAAU is required for each setting.

Seasonal airflow*

When Cooling

Saves energy while keeping a comfortable effective temperature by automatically switching between ventilation and cooling. When a pre-set temperature is reached, the air conditioning unit switches to swing fan operation to maintain the effective temperature. This clever function contributes to keeping a comfortable coolness.

The air conditioning unit automatically switches between circulator and heating. Wasted heat that accumulates near the ceiling is re-used via circulation. When a pre-set temperature is reached the air conditioner switches from heating to circulator and blows air in the horizontal direction. It pushes down the warm air that has gathered near the ceiling to people's height, thereby providing smart heating.

When Heating

*TAR-40MAAU is required for each setting.

Area Temperature Monitor

The 3D i-see Sensor monitors the whole room in sections and directs the airflow to areas of the room where the temperature does not match the temperature setting. (When cooling the room, if the middle of the room is detected to be hotter, more airflow is directed towards it.) This eliminates unnecessary heating / cooling and contributes to lower electricity costs.

Cooling mode

ENERGY-SAVING

Econo Cool Energy-Saving Feature

Econo Cool is an intelligent temperature control feature that adjusts the amount of air directed towards the body based on the air-outlet temperature. The setting temperature can be raised by as much as 4° F without any loss in comfort, thereby realizing a 20% gain in energy efficiency. (Function only available during manual cooling operation.)

	Conventional	Econo Cool
Ambient Temperature	95° F	95° F
Set Temperature	77° F	81° F
Perceived Temperature	86° F	85° F

Econo Cool Mode

A comfortable room environment is maintained even when setting the temperature 4° F higher than the conventional cooling mode.

Econo Cool on

Conventional cooling mode

Temperature distribution (° F)

Demand Function (Onsite Adjustment)

The demand function can be activated when the unit is equipped with a commercially available timer or an On/Off switch is added to the CNDM connector (option) on the control board of the outdoor unit. Energy consumption can be reduced up to 100% of the normal consumption according to the signal input from outside.

[Example: P-Series]

Limit energy consumption by changing the settings of SW7-1, SW1 and SW2 on the control board of the outdoor unit. The following settings are possible.

SW7-1	SW1	SW2	Energy Consumption
ON	OFF	OFF	100%
	ON	OFF	75%
	ON	ON	50%
	OFF	ON	0% (Stop)

* PUY/PUZ outdoor only

Blue Fin Heat Exchanger

Anti-corrosion treatment is done to the heat exchanger of the outdoor units. This coating prevents the corrosion of the aluminum fins caused by salt in the air especially in coastal areas. (Corrosion of the heat exchanger will effect the efficiency and performance of the air conditioner.)

AIR QUALITY

Nano Platinum Filter

This filter has a large capture area and incorporates nanometer-sized platinum-ceramic particles that work to kill bacteria and deodorize the circulating air.

Catechin Filter

Catechin is a bioflavonoid by-product of green tea with both antiviral and antioxidant qualities. In addition to improving air quality, it prevents the spreading of bacteria and viruses throughout the room, and also has an excellent deodorizing effect.

Air Filter

This filter can remove dust particles from the air.

Deodorizing Filter

The catalyst coating on the honeycomb-structured frame captures small foul-smelling substances in the air, then breaks down the source of the odors with the power of the ozone generated in a plasma electrode unit.

Electrostatic Anti-Allergy Enzyme Filter

This filter is charged with static electricity, enabling it to attract and capture dust particles that regular filters cannot capture. This filter can also trap allergens such as bacteria and decompose them using enzymes retained in the filter.

Air Purifying Filter

The filter has a large capture area and deodorize the circulating air.

Fresh-air Intake

Indoor air quality is enhanced by the direct intake of fresh exterior air.

High-efficiency Filter

This high-performance filter has a much finer mesh compared to standard filters, and is capable of capturing minute particulates floating in the air that were not previously caught.

Oil Mist Filter

The oil mist filter prevents oil mist from penetrating into the inner part of the air conditioner.

Long-life Filter

A special process for the entrapment surface improves the filtering effect, making the maintenance cycle longer than that of units equipped with conventional filters.

Filter Check Signal

Air conditioner operating time is monitored, and the user is notified when filter maintenance is necessary.

AIR DISTRIBUTION

Double Vane

Double vane separates the airflow in the different directions to deliver airflow not only across a wide area of the room, but also simultaneously to two people in different locations.

Natural Flow Operation

Airflow will become more like natural wind. An occupant will not be directly exposed to the airflow and feel more comfortable.

Indirect/Direct Mode

This mode offers finely-tuned operation by locating where an occupant is in the room and sends the air directly or indirectly according to the selected mode.

Powerful Operation

The air conditioner will automatically adjust the fan speed and set temperature for 15 minutes. Rapid cooling and heating will make the room comfortable more quickly.

Wide Airflow

Especially beneficial for large spaces, helping to ensure that the air is well circulated and reaches every corner of the room. Select the desired airflow pattern and it will distribute air horizontally over a wide-ranging 150° in heating mode and 100° in cooling mode.

Horizontal Vane

The air outlet vane swings up and down so that the airflow is spread evenly throughout the room.

Vertical Vane

The air outlet fin swings from side to side so that the airflow reaches every part of the room.

High Ceiling Mode

In the case of rooms with high ceilings, the outlet-air volume can be increased to ensure that air is circulated all the way to the floor.

Low Ceiling Mode

If the room has a low ceiling, the airflow volume can be reduced for less draft.

Auto Fan Speed Mode

The airflow speed mode adjusts the fan speed of the indoor unit automatically according to the present room conditions.

Auto Vane Control

Outlet vanes can be moved left and right, and up and down using the remote controller. This improved airflow control feature solves the problem of drafts.

BLUE FIN COATING

Blue Fin Condenser

Anti-corrosion treatment is done to the heat exchanger of the outdoor units. This coating prevents the corrosion of the aluminum fins caused by salt in the air especially in coastal areas. (Corrosion of the heat exchanger will effect the efficiency and performance of the air conditioner.)

Standard HEX coatings:

Rated for **240 hours** spraying time*

Blue Fin HEX coatings:

Rated for **960 hours** spraying time*

*Per JRA 9002 Standard

Coating is applied on all Nv-Series single-zone outdoor units

CONVENIENCE

Smart Set

Smart Set is a simplified setting function that recalls the preferred (pre-set) temperature by pressing a single button on the remote controller. Press the same button twice in repetition to immediately return to the previous temperature setting. Using this function contributes to comfortable waste-free operation, realizing the most suitable air conditioning settings and saving on power consumption when, for example, leaving the room or going to bed.

Auto Changeover

The air conditioner automatically switches between heating and cooling modes to maintain the desired temperature.

Low-temperature Cooling

Intelligent fan speed control in the outdoor unit ensures optimum performance even when the outside temperature is low.

Ampere Limit Adjustment

Dip switch settings can be used to adjust the maximum electrical current for operation. This function is highly recommended for managing energy costs.

***Maximum capacity is lowered with the use of this function.**

Auto Restart

Especially useful at the time of power outages, the unit turns back on automatically when power is restored.

Operation Lock (Outdoor unit)

To accommodate specific-use applications, cooling or heating operation can be specified when setting the control board of the outdoor unit. A convenient option when a system needs to be configured for exclusive cooling or heating service.

Sleep Mode

When Sleep Mode is activated using the wireless remote controller, it will switch to the settings described below.

- After 30 minutes, the set temperature will automatically change to the sleep mode set temperature which the user can set beforehand.
- The fan speed will immediately change to low fan speed.

On/Off Operation Timer

Use the remote controller to set the times of turning the air conditioner On/Off.

Weekly Timer Function

Easily set desired temperatures and operation ON/OFF times to match lifestyle patterns. Reduce wasted energy consumption by using the timer to prevent forgetting to turn off the unit and eliminate temperature setting adjustments.

■ Sample Operation Pattern (Winter/Heating mode)

	Mon.	Tues.	Wed.	Thurs.	Fri.	Sat.	Sun.
6:00 AM	ON 68°F	ON 68°F	ON 68°F	ON 68°F	ON 68°F	ON 68°F	ON 68°F
8:00 AM	Automatically changes to high-power operation at wake-up time						
10:00 AM	OFF	OFF	OFF	OFF	OFF	ON 64°F	ON 64°F
12:00 AM	Automatically turned off during work hours					Midday is warmer, so the temperature is set lower	
2:00 PM							
4:00 PM							
6:00 PM	ON 72°F	ON 72°F	ON 72°F	ON 72°F	ON 72°F	ON 72°F	ON 72°F
8:00 PM	Automatically turns on, synchronized with arrival at home					Automatically raises temperature setting to match time when outside-air temperature is low	
10:00 PM							
(during sleeping hours)	ON 64°F	ON 64°F	ON 64°F	ON 64°F	ON 64°F	ON 64°F	ON 64°F
	Automatically lowers temperature at bedtime for energy-saving operation at night						

Settings

Pattern Settings: Input up to four settings for each day

Settings: • Start/Stop operation • Temperature setting *The operation mode cannot be set.

■ Easy set-up using dedicated buttons

The remote controller is equipped with buttons that are used exclusively for setting the Weekly Timer. Setting operation patterns is easy and quick.

- Start by pushing the "SET" button and follow the instructions to set the desired patterns. Once all of the desired patterns are input, point the top end of the remote controller at the indoor unit and push the "SET" button one more time. (Push the "SET" button only after inputting all of the desired patterns into the remote controller memory. Pushing the "CANCEL" button will end the set-up process without sending the operation patterns to the indoor unit).
- It takes a few seconds to transmit the Weekly Timer operation patterns to the indoor unit. Please continue to point the remote controller at the indoor unit until all data has been sent.

SYSTEM CONTROL

System Group Control

The same remote controller is capable of controlling the operational status of up to 16 refrigerant systems.

kumo cloud® Wireless Interface

Along with your smart phone or tablet device, you can manage your system in multiple venues, such as home, work and vacation locations. You can control functions like turning on/off, fan speed, and vane direction.

M-NET Connection

Units can be connected to MELANS system controllers (M-NET controllers) such as the AE-200A.

MX Connection

Connection to the MX multi-split outdoor unit is possible.

Wireless Interface 2

Manage Your Comfort From Anywhere With kumo cloud

- Now compatible with Nv-Series and P-Series systems
- kumo cloud allows for a Trane®/Mitsubishi Electric indoor unit to be controlled remotely or locally with the app
- For product information go to kumocloud.com
- Ability to group units and organize groups into sites
- Batch command units
- Ability to program events and scheduling into the unit itself
- Available in Fahrenheit or Celsius
- Easy to connect the device to your router using the kumo cloud app
- Each indoor unit must be equipped with a Wireless Interface (PAC-USWHS002-WF-2) installed by a licensed contractor
- Secure boot to prevent unauthorized reprogramming of Wireless Interface
- Intuitive initial settings feature for Nv- & P-Series equipment

Did you forget to turn off your unit before leaving for vacation? You don't have a worry in the world when you have the kumo cloud app. You can change temperatures, set and store a schedule, and much more from anywhere. It really is comfort made personal.

Anytime, Anywhere Control kumo cloud gives you the ability to effortlessly control your home's comfort. Whether you're out for the day or the month, looking to cool down or warm up, kumo cloud gives you control from any smart phone, tablet or web browser.

Program and Schedules: kumo cloud walks you through a five-step process to easily schedule the mode, set temperature and fan speed, for an individual zone or several zones at once.

Easily Zoned: Once your Wireless Interface is installed on your indoor unit by a trained HVAC professional, the indoor unit will discover the app. Name your indoor units, create groups, and organize multiple properties from one user-friendly app.

Check Filter Status: You never have to manually check a filter again. kumo cloud can tell you the status of any filter in your system at any time.

Simple wall-mounted design controllers can be installed anywhere with large, backlit, easy to read display. Both the controller and receiver is enabled with RedLINK reliability.

MRCH2 kumo touch Controller Specifications

- Touch panel, Backlit, easy-to-read display
- Used RedLINK™ 3.0 wireless technology
 - Not compatible with MHK1, MOS1, and MCCH1 RedLINK 2.0 wireless technology environment
- User functions allow user to set:
 - On/Off
 - Operation modes cool, heat, drying, fan
 - Set temperature (separate dual set points for heat and cool)
 - Fan speed setting
 - Airflow direction
- Set temperature range limits (dependent on the system connected):
 - Cooling from 50° to 99° F
 - Heating from 40° to 90° F
 - Auto from 50° to 90° F with dual temperature setting
- MHK2 Scheduling options:
 - No Schedule
 - MO-SU = Every day the same
 - MO-FR, SA, SU = 5-1-1 schedule
 - MO-FR, SA-SU = 5-2 schedule
 - Each Day = Every day individual
 - Allow kumo cloud to be schedule holder
- Hold function
- Temporary or Permanent schedule override
- Lockout:
 - On, Off, Mode, Fan Speed, Set point, Vane Direction
- Day/Time display with a 12 or 24-hour clock
- Supports both Fahrenheit and Celsius
- RedLINK™ Wireless Connection Status
- Filter sign display
- Diagnostics: Displays and records error codes
- Adjustable auto mode deadband
- Space temperature offset adjustment
- Space humidity offset adjustment
- Hide (on screen only)
 - Indoor temperature
 - Indoor humidity
- Temperature Sensing Source
 - MHK2
 - Indoor Unit
 - RedLINK Wireless Indoor Air Sensor (IAS)
 - Average of MHK2 and RedLINK Wireless Indoor Air Sensor (IAS)
- Indoor Humidity Source
 - MHK2
 - RedLINK Wireless Indoor Air Sensor (IAS)
 - Average of MHK2 and RedLINK Wireless Indoor Air Sensor (IAS)
- Improved indoor unit function code list
 - Indoor unit type
 - Expanded to 28 indoor unit codes
- Reset to factory default
- Uses two “AA” alkaline batteries (included)
- Dimensions: 4-5/64" x 4-5/64" x 1-1/16" (104 x 104 x 27 mm)
- Operating Ambient Temperature: 32° to 120° F (0° to 48.9° C)
- Operating Relative Humidity: 5% to 90%

MIFH2 WIRELESS RECEIVER SPECIFICATIONS:

- Included in MHK2 Kit
- Mounts next to or near indoor units to allow MRCH2 Remote Controller operation
- Connects to indoor unit control board with MRC2 Cable
- Dimensions: 3-3/32" H x 1-3/4" W x 39/64" D (74.8 x 44.4 x 15.4 mm)
- Operating Ambient Temperature: -40° to 165° F (-40° to 73.9° C)
- Operating Relative Humidity: 5% to 95%

MRC2 CABLE

- Included in MHK2 Kit in the MIFH2 box
- Connects MIFH2 Wireless Receiver to the CN105 connector on indoor unit control board
- Length: 39-23/64" (1 m)

WIRED CONTROLLERS

Simple MA Remote Controller

- Controls group operation for up to 16 indoor units in a single group
- Supports Fahrenheit and Celsius
- User defined functions:
 - On/Off
 - Operation modes: Heat/Cool/Auto/Dry
 - Fan speed setting
 - Airflow direction
 - Set temperature range: 40° F to 95° F depending on operation mode and indoor unit connected
- Set temperature range limit for cool and heat modes
- LOSSNAY®: Simple MA for interlocked system can set high/low/stop on LOSSNAY
- Room temperature can be sensed either at indoor unit (default) or at the remote controller
- Dimensions: 2-3/4" W x 9/16" D x 4-3/4" H
- Requires MAC-334IF-E for use with Nv-Series products

TAC-YT53CRAU-J

Deluxe MA Remote Controller

- User defined functions:
 - On/Off
 - Operation modes: Heat/Cool/Auto/Dry
 - Room temperature setting & Temperature range restriction
 - Manual vane angle (P-Series cassette indoor units)
 - Smooth maintenance (P-Series only)
 - Auto-off timer & Weekly timer
- Setting screen for 3D i-see Sensor®
- Draft reduction mode
- Daylight Saving Time (DST)
- Dimensions: 4-3/4" W x 3/4" D x 4-3/4" H
- Requires MAC-334IF-E for use with Nv-Series ductless products
- Room temperature displays room temperature sensed either at the indoor unit (default) or at the controller

TAR-40MAAU

Touch MA Remote Controller

- User-friendly, customizable full color touch panel display
- Ability to add a custom logo on the display
- Large icons with 180 color patterns
- Daily and weekly timers
- Password protected
- Requires MAC-334IF-E for use with Nv-Series products
- The MELRemo app and Bluetooth® Low Energy (BLE) technology supports communication with smartphones or tablets in multiple languages

TAR-CT01MAU-SB

INTERFACE DEVICES

T-STAT Thermostat Interface

- Control your Zoned Comfort Solution using a third-party 24VAC transformer
- Wires back to the indoor unit using CN105 to replace the return air temperature sensor
- Maximum wiring length: 39 (12 m)
- Dimensions: 3.17 in (w) x 3.96 in (h) x 0.93 in (d) (80.6 x 100.6 x 23.7 mm)
- Exterior shell made of ABS resin
- Environment Conditions — operating temperature range: Installation manual states that the temperature should be between 32° F and 104° F (0° C to 40° C)

BACnet® Interface

- Allows for third-party home automation/building management system to control indoor unit
- One interface required per indoor unit
- Compatible with remote controllers
- Dimensions: 3.74" x 2" x 0.75"
- Cable length: 37"
- Allows for third-party home automation/building management system to control indoor unit

USNAP Interface

- Allows indoor units to participate in demand response events
- Works with CTA 2045 DC Form Factor Universal Communication Modules (UCMs)
- 3 LEDs to display device status
 - Communication with UCM
 - Communication to indoor unit
 - Demand Response Events
- System Reset

MAC-334IF-E System Control Interface

- Allows Nv-Series indoor units to communicate with the CITY MULTI® Controls Network via M-NET
- Provides an input to allow remote On/Off control of indoor unit
- Allows Nv-Series indoor units to connect to MHK2 Wall-Mounted Wireless Controller when using other MAC-334IF-E functions
- Allows Nv-Series indoor units to connect to a MA controller
- Power: 12V DC (supplied from indoor unit)

COOLING ONLY

For applications with needs for only cooling, there are cooling-only models to choose from.

Wall-mounted Units	
WST Model	

WPH Model

The WPH Model is designed for optimum cooling/heating performance as well as operational comfort. Quiet, energy-saving operation is supported by some of our latest technologies. Advanced functions such as the 3D i-see Sensor® temperature control and Triple-action filtration raise room comfort levels to new heights.

NTXWPH(06/09/12/15/18)A112A*
NTXWPH18A112A*

ENERGY STAR® Certified for Entire Range of Series

The WPH Model has achieved an industry-leading efficiency of 33.1 SEER (NTXWPH06A112A*) and 30.5 SEER (NTXWPH09A112A*). All systems of the WPH Model feature high efficiencies and are ENERGY STAR® qualified, meaning that these units can save up to 25% on heating and cooling costs when installed correctly.

Pro-Heat INVERTER®

The WPH Model can provide heating even when it's minus 13° F outdoor ambient, producing up to 100% heating capacity at 5° F. These units offer year-round comfort even in extreme climates.

Operation guaranteed at minus 13° F,
100% heating capacity at 5° F

Base Heater equipped as standard*

The base heater restricts lowered capacity and operation shutdowns caused by the drain water freezing. This supports stable operation in low-temperature environments.

Without base heater

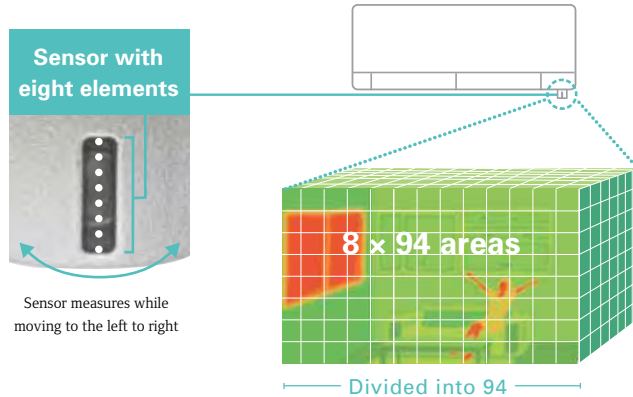

With base heater

— NTXSPH
— Standard Heat Pump

*Standard for NTXSPB models
Optional for NTXSPH models

The WPH Model is equipped with 3D i-see Sensor®, an infrared-ray Sensor that measures the temperature at distant positions. While moving to the left and right, eight vertically arranged Sensor elements analyze the room temperature in three dimensions. This detailed analysis makes it possible to judge where people are in the room, thus allowing creation of features such as Indirect Airflow, to avoid airflow hitting people directly, and Direct Airflow to deliver airflow to where people are located.

Indirect Airflow

The Indirect Airflow setting can be used when the flow of air feels too strong or direct. For example, it can be used during cooling to avert airflow and prevent body temperature from becoming excessively cooled.

Direct Airflow

This setting can be used to directly target airflow at people such as for immediate comfort when coming indoors on a hot (cold) day.

Absence Detection

The Sensors detect whether there are people in the room. When no one is in the room the unit automatically switches to energy-saving mode.

The 3D i-see Sensor detects people's absence and the power consumption is automatically reduced approximately 10% after 10 minutes and 20% after 60 minutes.

Natural Flow

To create healthy airflow, the most important aspect is that the flow of air feels natural. Our solution to this is Natural Flow, thanks to our technology that freely and flexibly controls airflow.

Double Vane

Our double vane separates the airflow in the left and right directions to deliver airflow not only across a wide area of the room, but also simultaneously to two people in different locations.

Through realizing airflow that imitates a natural breeze, we have avoided the unpleasant feeling of being hit directly by constant, unnatural airflow.

Base data for Natural Flow

Kirigamine Highland

Measuring actual data of natural wind

Kirigamine Highland is one of the most famous sightseeing spots in Japan, and is visited by a large number of people for its pleasant and comfortable environment. We have attempted to recreate this Kirigamine Highland comfort. As part of development, seeking to create a natural airflow, we measured actual data on the refreshing breezes of Kirigamine Highland. Through imitating the natural waveforms of this data, we have been able to recreate almost-imperceptible currents of gently comforting airflow.

Analysis of natural wind

Triple-action Filtration

Air, like water, is something we use every day unconsciously. Yet, clean, fresh air is a vital part of creating a healthy space for humans. Healthy air is achieved with three filters: the Nano Platinum filter, the Deodorizing filter, and the Electrostatic anti-allergy enzyme filter.

Nano Platinum Filters

This filter has a large capture area and incorporates nanometer-sized platinum-ceramic particles that work to kill bacteria and deodorize the circulating air.

Deodorizing Filter

This filter removes chemical substances such as ammonia, methyl mercaptan, trimethylamine and hydrogen sulphide at the nano-level (1/1,000,000 of a millimeter).

Electrostatic Anti-Allergy Enzyme Filter

This filter is charged with static electricity, enabling it to attract and capture dust particles that regular filters cannot capture. Also, it can trap allergens and decompose them using enzymes retained in the filter.

Quiet Operation

The indoor unit noise level is as low as 20dB(A) for WPH06/09 models, offering a peaceful inside environment.

MSZ-EF Model

Developed to complement modern interior room décor, the EF Model are available in three colors specially chosen to blend in naturally wherever installed.

A Stylish Line-up Matches Any Room Décor

The streamlined wall-mounted indoor units have eloquent edges, expressing sophistication and quality. Combining impressively low power consumption and quiet yet powerful performance, these units provide a best-match scenario for diverse interior designs while simultaneously ensuring maximum room and energy savings.

Quiet Operation All Day Long

Our advanced Quiet Mode fan speed setting provides super-quiet operation as low as 21dB(A) for EF09/12 models. This unique feature makes the EF Model ideal for use in any situation.

Superior Exterior and Operating Design Concept

The indoor unit of the EF Model keeps its amazingly thin form even during operation. The only physical change notable is the movement of the variable vent. As a result, a slim attractive look is maintained.

NTXWST(06/09/12/15)A112A*
NTYWST(09/12/15)A112A*

ENERGY STAR® Qualified for Entire Range of NT(X/Y)WST Model

All systems of the NTXWST and NTYWST Model feature high efficiencies and are ENERGY STAR® qualified.

Wide Line-up with Family Design

Eight different capacities (6,000 BTU/H to 36,000 BTU/H) are available to meet your diversified air conditioning needs, and all capacities from 6,000 BTU/H to 36,000 BTU/H indoor units have a family design. From small rooms to large living rooms, it is possible to coordinate residences with a unified design.

NT(X/Y)WST(30/36)A112A*

Compact Design

Slim and compact indoor units provide enhanced, industry-leading performance for cooling and heating.

NTXWST(06/09/12/15)A112A*
NTYWST(09/12/15)A112A*

Quiet Operation

The indoor unit noise level is as low as 19dB(A) for WST09/12 models, offering a peaceful inside environment.

Powerful Operation (WST24, WST30/36)

Depending on the capacity, the unit will automatically adjust the fan speed and set temperature for 15 minutes. Rapid cooling and heating will make the room comfortable more quickly.

Fan speed: Exclusive speed for POWERFUL mode.

Horizontal Vane: Set position, or downward airflow position during AUTO setting.

Nano Platinum Filter (NTXWST06, NT(X/Y)WST09/12/15/18/24)

This filter generates stable antibacterial and deodorizing effects. The size of the three-dimensional surface has been increased as well, enlarging the filter capture area. These features give the Nano Platinum Filter better dust collection performance than conventional filters. The superior air cleaning effectiveness raises room comfort yet another level.

Smart Set (NTXWST06, NT(X/Y)WST09/12/15/18/24)

Smart Set is a simplified setting function that recalls the preferred (pre-set) temperature by pressing a single button on the remote controller. Press the same button twice in repetition to immediately return to the previous temperature setting. Using this function contributes to comfortable, waste-free operation, realizing the most suitable air conditioning settings and saving on power consumption when, for example, leaving the room or going to bed.

Notes:

AHRI Rated Conditions
(Rated data is determined at a fixed compressor speed)

Conditions

¹Indoor units receive power from outdoor units through field-supplied interconnected wiring.

⁴Applications should be restricted to comfort cooling only; equipment cooling applications are not recommended for low ambient temperature conditions.

¹Cooling (Indoor // Outdoor)

²Heating at 47°F (Indoor // Outdoor)

³Heating at 17°F (Indoor // Outdoor)

⁴Heating at 5°F (Indoor // Outdoor)

°F 80 DB, 67 WB // 95 DB, 75 WB

°F 70 DB, 60 WB // 47 DB, 43 WB

°F 70 DB, 60 WB // 17 DB, 15 WB

°F 70 DB, 60 WB // 5 DB, 4 WB

WMT Model

Compact, high-performance indoor and outdoor units and advanced inverter technologies provide superior energy savings and comfort in all rooms.

Stylish Design with Flat Panel Front

A stylish flat panel design is employed for the front of the indoor unit. The simple look matches room aesthetics.

Econo Cool Energy-Saving Feature

Econo Cool is an intelligent temperature control feature that adjusts the amount of air directed towards the body based on the air-outlet temperature. The setting temperature can be raised by as much as 4° F without any loss in comfort, thereby realizing a 20% gain in energy efficiency. (Function only available during manual cooling operation.)

	Conventional	Econo Cool
Ambient Temperature	95° F	95° F
Set Temperature	77° F	81° F
Perceived Temperature	86° F	85° F

Air Filter

This filter can remove dust particles from the air.

Anti-allergy Enzyme Filter*

(*Optional)

This filter works to trap allergens such as bacteria and decompose them using enzymes retained in the filter.

NTXWMT09/12/15A112A*

NTXWMT18/24A112A*

Quiet Operation

Quiet, relaxing space is within reach. Operational noise is a low 22dB(A) (09/12 classes). Operation is so silent you might even forget the air conditioner is on.

Econo Cool Mode

A comfortable room environment is maintained even when setting the temperature 4° F higher than the conventional cooling mode.

12-hour Timer

Allows for one ON/OFF cycle during a 12-hour period.

Blue Fin Condenser

Anti-corrosion treatment is done to the heat exchanger of the outdoor units. This coating prevents the corrosion of the aluminum fins caused by salt in the air especially in coastal areas. (Corrosion of the heat exchanger will effect the efficiency and performance of the air conditioner.)

°F 70 DB, 60 WB // 5 DB, 4 WB

WMT 115V Model

The 115 volt single-zone WMT 115V Model is ideal for homes or businesses with electrical service restrictions.

NTXWMT(09/12)A111A*

Stylish Design with Flat Panel Front

A stylish flat panel design is employed for the front of the indoor unit. The simple look matches room aesthetics.

Quiet Operation

Quiet, relaxing space is within reach. Operational noise is a low 22dB(A) (09/12 classes). Operation is so silent you might even forget the air conditioner is on.

Econo Cool Energy-Saving Feature

Econo Cool is an intelligent temperature control feature that adjusts the amount of air directed towards the body based on the air-outlet temperature. The setting temperature can be raised by as much as 4° F without any loss in comfort, thereby realizing a 20% gain in energy efficiency. (Function only available during manual cooling operation.)

	Conventional	Econo Cool
Ambient Temperature	95° F	95° F
Set Temperature	77° F	81° F
Perceived Temperature	86° F	85° F

Econo Cool Mode

A comfortable room environment is maintained even when setting the temperature 4° F higher than the conventional cooling mode.

Air Filter

This filter can remove dust particles from the air.

12-hour Timer

Allows for one ON/OFF cycle during a 12-hour period.

Anti-allergy Enzyme Filter*

(*Optional)

This filter works to trap allergens such as bacteria and decompose them using enzymes retained in the filter.

Blue Fin Condenser

Anti-corrosion treatment is done to the heat exchanger of the outdoor units. This coating prevents the corrosion of the aluminum fins caused by salt in the air especially in coastal areas. (Corrosion of the heat exchanger will effect the efficiency and performance of the air conditioner.)

⁵Indoor units receive power from outdoor units through field-supplied interconnected wiring.

⁶Applications should be restricted to comfort cooling only; equipment cooling applications are not recommended for low ambient temperature conditions.

Konnect Series

Konnect Series heat pump and Pro-Heat outdoor units achieve high energy-saving performance as well as heating capacity and all the combinations are ENERGY STAR® qualified. For an attractive and optimum use of indoor space, you can choose the indoor unit that best matches your needs.

HP: Heat Pump

Pro-Heat: Pro-Heat Hyper-Heating

The Pro-Heat models provide heating even when it's -13° F (-25° C) outdoor ambient, producing up to 100% heating capacity at 5° F (-15° C). These units offer year-round comfort even in extreme climates.

Built-in Base Heater

The base heater restricts lowered capacity and operation shutdowns caused by the drain water freezing. This supports stable operation in low-temperature environments.

Operation Guaranteed at Outside Temperature of -13° F (-25° C)

Without base heater

With base heater

Compact and Powerful Compressor

A special manufacturing technology, Heat Caulking Fixing Method, has been introduced to reduce compressor size while maintaining a high compressor output. This technology enables the installation of a powerful compressor in compact outdoor units. As a result, excellent heating performance is achieved when operating in cold outdoor environments.

Compressor using conventional method (Arc spot-welded method)

Compressor using Heat Caulking Fixing Method

UKS Model

Introducing EZ FIT™ ceiling cassette with streamlined interior dimensions and a sharp, sleek appearance.

NTXUKS(09/15/18)A112A*

Slim Design

Industry leading slim body realized a simple design with linear beauty.

Ceiling Mounted

Installing the ceiling-mounted EZ FIT Model unit in a room creates a more spacious feel that enhances room comfort. This overhead format is also an excellent solution when lighting equipment is installed at the center of the room and fixtures such as book shelves are mounted on wall surfaces.

Slim Body

The new units are designed with a slim body (only 7-5/16"), ensuring easy installation even when low ceiling cavities limit installation space. The need for ceiling cavity service space is also eliminated, further reducing the dimensions required for installation.

Set Airflow According to Ceiling Height

Dual-level airflow selection is engineered to accommodate specific ceiling heights. This is a key feature for adjusting airflow effectively when it is either too strong or too weak due to being mismatched with the height of the ceiling.

	09	12	18
Standard	7-7/8 ft.	7-7/8 ft.	7-7/8 ft.
High ceiling	8-7/8 ft.	8-7/8 ft.	8-7/8 ft.

Auto Vane Control

Outlet vanes can be moved left and right, and up and down using the remote controller. This improved airflow control feature solves the problem of drafts.

Up and Down

Left and Right

*Only available when Econo Cool is set.

Built-in Weekly Timer Function

Easily set desired temperatures and operation ON/OFF times to match lifestyle patterns. Reduce wasted energy consumption by using the timer to prevent forgetting to turn off the unit and eliminate temperature setting adjustments.

■ Example Operation Pattern (Winter/Heating mode)

	Mon.	Tues.	Wed.	Thurs.	Fri.	Sat.	Sun.
6:00 AM	ON 68°F	ON 68°F	ON 68°F	ON 68°F	ON 68°F	ON 68°F	ON 68°F
8:00 AM	Automatically changes to high-power operation at wake-up time						
10:00 AM	OFF	OFF	OFF	OFF	OFF	ON 64°F	ON 64°F
12:00 AM	Automatically turned off during work hours					Midday is warmer, so the temperature is set lower	
2:00 PM							
4:00 PM							
6:00 PM	ON 72°F	ON 72°F	ON 72°F	ON 72°F	ON 72°F	ON 72°F	ON 72°F
8:00 PM	Automatically turns on, synchronized with arrival at home					Automatically raises temperature setting to match time when outside-air temperature is low	
10:00 PM							
(during sleeping hours)	ON 64°F	ON 64°F	ON 64°F	ON 64°F	ON 64°F	ON 64°F	ON 64°F
	Automatically lowers temperature at bedtime for energy-saving operation at night						

Settings

Pattern Settings: Input up to four settings for each day

Settings: •Start/Stop operation •Temperature setting *The operation mode cannot be set.

■ Easy set-up using dedicated buttons

The remote controller is equipped with buttons that are used exclusively for setting the Weekly Timer. Setting operation patterns is easy and quick.

How to set the Weekly Timer

- Start by pushing the SET button and follow the instructions to set the desired patterns. Once all of the desired patterns are input, point the top end of the remote controller at the indoor unit and push the SET button one more time. (Push the SET button only after inputting all of the desired patterns into the remote controller memory. Pushing the CANCEL button will end the set-up process without sending the operation patterns to the indoor unit).
- It takes a few seconds to transmit the Weekly Timer operation patterns to the indoor unit. Please continue to point the remote controller at the indoor unit until all data has been sent.

Easy Installation

Industry Leading Slim Body

The EZ FIT™ can be installed within standard joists that span 16 inches on center. There is no need for large-scale construction, such as the cutting of the joist.

Temporary hanging hook

Work efficiency has improved during installation.

Drain Piping Supporters + Drain Cover

Industry leading slim body realized a simple design with linear beauty.

Wireless Interface Installation

(Optional)

The indoor unit panel is equipped with a Wireless Interface pocket, contributing to the beautiful appearance, easy installation and maintenance.

AMT Model

The multi-position air handler is well-suited for supplemental or replacement applications, and allows for effective and efficient air conditioning as airflow strength can be set to ensure any desired comfort level.

NTXAMT(12/18/24/30/36)A112A*

Slim Design

Industry leading quality and compact design.

Flexibility

The AMT air handler is truly multi-positional unit offering up, down*, left or right airflow, making it ideal for tight and unique spaces.

*Downflow kit required for downflow installations

Quiet

The DC motor ensures quiet and efficient operation year round.

Small Footprint

The AMT's compact design makes it possible to replace any kind of existing furnace or air handler, and can also be hidden in a closet or basement corner. The single-zone and multi-zone outdoor units are compact as well, since up to eight indoor units can be connected to one outdoor unit.

CKS Model

Compact, lightweight ceiling cassette units with 4-way air outlets provide maximum comfort by evenly distributing airflow throughout the entire room.

Flexibility

The attractive CKS Model ceiling cassette units offer a slim width and a 4-way air outlet. The size and shape are a perfect match for ceilings made using 2'x2' construction and its light weight package makes installation easy.

■ NTXCKS12A112A*

* Access door is required

Fresh-air Intake

A duct hole is provided in the main body, making it possible to intake fresh air from outside.

■ Intake-air volume

Static pressure: P [in. W.G. x 10⁻²]

Note: Fresh-air intake amount should be 20% or less of whole air amount to prevent dew dripping. Booster fan required.

DKS Model

This concealed ceiling-mounted indoor unit model is compact, and fits easily into rooms with lowered ceilings. Highly reliable energy-saving performance makes it a best match choice for concealed unit installations.

NTXDKS(09/12/15/18)A112A*4

Compact Ceiling-concealed Units

Only the intake-air grille and outlet vents are visible when using this ceiling-concealed indoor unit. The rest of the unit is conveniently hidden in the ceiling cavity, essentially leaving the ceiling and walls free of bulky looking devices and maintaining a high-class interior décor. The compact units require minimal space and can be installed in buildings with lowered ceilings, where exposed units were the rule in the past.

- Ⓐ Air inlet
- Ⓑ Air outlet
- Ⓒ Access door
- Ⓓ Ceiling surface
- Ⓔ Canvas duct
- Ⓕ Air filter
- Ⓖ Inlet grille

Selection of Fan Speeds and Static Pressure Levels

Three fan speed settings (Low, Medium and High) and four static pressure levels are available for all capacities.

Static Pressure Levels

Notes:

AHRI Rated Conditions

(Rated data is determined at a fixed compressor speed)

Conditions

¹Cooling (Indoor // Outdoor)

²Heating at 47°F (Indoor // Outdoor)

³Heating at 17°F (Indoor // Outdoor)

⁴Heating at 5°F (Indoor // Outdoor)

⁵Indoor units receive power from outdoor units through field-supplied interconnected wiring.

⁶Applications should be restricted to comfort cooling only; equipment cooling applications are not recommended for low ambient temperature conditions.

°F 70 DB, 60 WB // 5 DB, 4 WB

PEAD Model

The thin, ceiling-concealed indoor units of this model are the perfect answer for the air conditioning needs of buildings with minimum ceiling installation space and wide-ranging external static pressure. Energy-saving efficiency has been improved, reducing electricity consumption and contributing to a further reduction in operating cost.

Compact Indoor Units

The height is only 9-7/8" for all sizes of this model from 12 to 42 kBTU/H. This makes it possible for the unit to be installed in low ceilings with minimal clearance space.

External Static Pressure

External static pressure conversion can be set up to five settings. Capable of being set to a maximum of 0.60 In.W.G., units are applicable to a wide range of building types.

■ External static pressure

Model	12	18	24	30	36	42
PEAD-A AA	0.14-0.20-0.28-0.40-0.60 In. W.G.					

High Energy Efficiency

SEER/HSPF has been greatly improved, and 12,000/18,000 BTU/H models have been added to the line-up.

Built-in Drain Lift Mechanism

All models feature a built-in drain lift mechanism for removal of condensate. The unit's fail-safe mechanism recognizes when there is a high liquid level in the condensate pan and turns off the indoor fan and the outdoor unit compressor to prevent overflow.

P-SERIES

The P-Series is designed to achieve industry-leading seasonal energy-efficiency through use of new technologies and high-performance compressors. Installation is easy thanks to outdoor units with a side-flow configuration, a maximum piping length of 225 ft. PUY only and pipe-replacement technologies.

Industry Leading Energy Efficiency

Industry-leading energy efficiency has been achieved through optimization of a newly designed compressor and the use of the latest energy-saving technologies. All compressors offer high performance due to advanced variable-speed INVERTER-drive technology, which varies the compressor speed dynamically to continuously adapt to the conditioning requirements of the room.

Advanced Energy-saving Technology

Highly efficient fan for outdoor unit

Fan opening of 21-3/4" (A36-42)

The opening for the fan in the outdoor unit is 21-3/4" in diameter. By exchanging heat more efficiently, this will contribute to energy-saving and low noise level.

The opening for the fan in the outdoor unit is 21-3/4" in diameter.

Improved fan (A36-42)

A newly designed fan has been adopted, increasing airflow capacity and reducing operation noise.

Fan rear edge

Highly efficient heat exchanger

High-density heat exchanger (A36-42)

The A36-42 units use 5/16"-diameter pipe. The high-density heat exchanger contributes to efficient heat exchange and reduces the amount of refrigerant used, which is better for the environment.

2 lines, 64 columns (A36-42)

COOLING ONLY

PUY Model

Low ambient cooling operation range

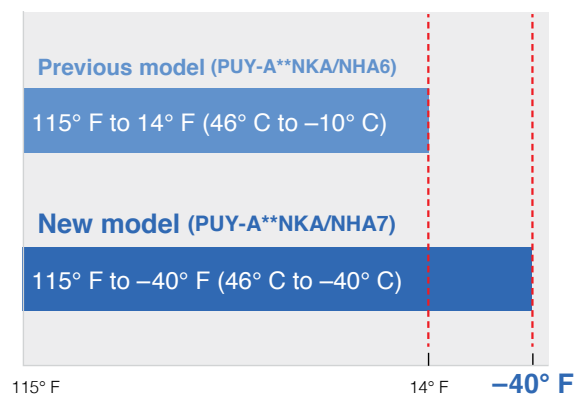

High Reliability and Performance in Low Ambient Conditions

By changing the fan speed control in low ambient temperatures, the PUY model can offer stable operation down to -40°F . This model range is well suited for cooling needs in cold regions.

*Optional Air Protection Guide/Wind Baffle is needed when ambient temperature is under 23°F .

Low ambient cooling operation range

High capacity at low ambient condition

Quick auto restart after power failure

In case of power failures, the time until auto restart became shorter from 180 seconds to 60 seconds. The unit will quickly restart with the same operation mode as before the power failure.

Backup rotation function

The two units can operate alternately so the units can maintain their quality for a longer period of time, and so that even if there is trouble with one unit, the other unit will keep operating.

*Can only be used with TAR-40MAU controller

Continuous operation

Control algorithm allows for stable continuous operation to meet cooling requirements all year round. The unit will quickly restart with the same operation mode as before the power failure.

HEAT PUMP PUZ Model

Quiet and Comfort

Sound level

PUZ Series outdoor unit*
*PUZ-A12/18 cooling mode

Energy saving

Not only do all capacities meet standard requirements, but they also are ENERGY STAR® certified*, with top level efficiency.

*With PLA-A12/18/24/36 indoor unit.

All units are inverter-driven, operating efficiently in accordance to the cooling/heating load.

Wide Operation Range

Due to the wide operation range, the units can be used in many different climates.

Cooling

115° F to 0° F*1 (46° C to -18.8° C)

Heating

70° F to -4° F (19° C to -20° C)*2

*1 In case that the air protection guide wind baffle is installed. (In case the wind baffle is not installed, the minimum temperature will be 23° F (-5° C) DB)

*2 A24/30/36/42

Flexible Installation

Long piping length

The long piping length allows them to be installed in unnoticeable places such as rooftops.

	Piping	
	Length (ft)	Height (ft)
PUZ-A12NKA7	100	100
PUZ-A18NKA7	100	100

PUZ-A30NHA7	165	100
PUZ-A36NKA7	165	100
PUZ-A42NKA7	165	100

Various types of indoor units

With various types of indoor units, there is a perfect match for any type of application, starting from residential homes to restaurants and offices.

PRO-HEAT PUZ-HA Model

Improved Heating Performance

Our unique Flash Injection circuit achieves remarkably high heating performance. This technology has resulted in an excellent heating capacity rating in outdoor temperatures as low as 5° F, and the guaranteed heating operation range of the heating mode has been extended to -13° F. Accordingly, the hyper-heating PUZ-HA Model are perfect for warming homes in the coldest of regions.

Enhanced Comfort

The Flash Injection circuit improves start-up and recover from the defrosting operation. A newly introduced defrost operation control also improves defrost frequency. These features enable the temperature to reach the set temperature more quickly, and contribute to maintaining it at the desired setting.

Quick Start-up

■ Operation at 36° F outdoor temperature

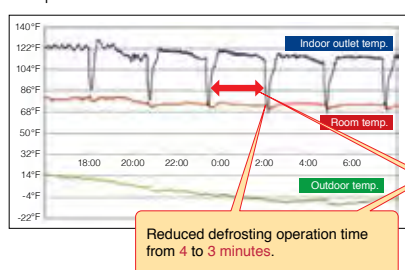

■ Operation at -4° F outdoor temperature

Pro-Heat Defrost Control and Faster Recovery from Defrost Operation Field Test Results: Office building in Asahikawa, Hokkaido, Japan

Horizontal Airflow

For users seeking further energy savings, we offer a wide line-up from 12-42 KBTU/H.

Draft reduction vane setting

The newly function Draft Reduction of manual vane setting makes the air flow direction more horizontal than usual horizontal vane setting. It reduces a drafty feeling dramatically.

*The draft reduction can be set for only 1 vane. TAR-40MAAU is required for this setting.

Individual vane settings

72 patterns of airflow to accommodate any room layout are available.

The number of outlet can be set to 4, 3, or 2. Flexible airflow is available by fixing the up-down airflow direction of the outlet with a wired remote controller (or manually).

72 airflow patterns

4-, 3-, or 2- way outlet selection*

*Optional parts air outlet shutter plate is required for 2- or 3- way outlet selection.

Setting the air direction for each outlet with wired remote controller

Easy Installation

Electrical box wiring

After reviewing the power supply terminal position in the electrical box, the structure was redesigned to improve connectivity. This has made previously complex wiring work easier.

■ Previous Model (BA Model)

■ New Model (EA Model)

Increased space for piping work

The top and bottom positions of the liquid and gas pipes have been reversed to allow the gas pipe work, which requires more effort, to be completed first. Further, through structural innovations related to the space around the pipes, the area where the spanner can be moved has been increased, thus improving liquid pipe work and enabling it to be completed smoothly.

Temporary hanging hook

The structure of the panel has been revised and is now equipped with a temporary hanging hook. This has improved work efficiency during panel installation.

No need to remove screws

Installation is possible without removing the screws for the corner panel and the control box, simply loosen them. This lowers the risk of losing screws.

■ Corner panel

■ Corner box cover

Lightweight decorative panel

After reviewing the structure and materials, weight has been reduced approximately 20% compared to the previous model, reducing the burden of installation.

Detects number of people

The 3D i-see Sensor* detects the number of people in the room and adjusts the power accordingly. This makes automatic power-saving operation possible in places where the number of people changes frequently. Additionally, when the area is continuously unoccupied, the system switches to a more enhanced power-saving mode. Depending on the setting, it can also stop the operation.

Detects people's position

Once a person is detected, the angle of the vane is automatically adjusted. Each vane can be independently set to Direct Airflow or Indirect Airflow according to taste.

Detects number of people

Room occupancy energy-saving mode

The 3D i-see Sensor detects the number of people in the room. It then calculates the occupancy rate based on the maximum number of people in the room up to that point in time in order to save air conditioning power. When the occupancy rate is approximately 30%, air-conditioning power equivalent to 2° F during both cooling and heating operation is saved. The temperature is controlled according to the number of people.

No occupancy energy-saving mode

When 3D i-see Sensor detects that no one is in the room, the system is switched to a pre-set power-saving mode. If the room remains unoccupied for more than 60min, air-conditioning power equivalent to 4° F during both cooling and heating operation is saved. This contributes to preventing waste in terms of heating and cooling.

No occupancy Auto-OFF mode

When the room remains unoccupied for a pre-set period of time, the air conditioner turns off automatically, thereby providing even greater power savings. The time until operation is stopped can be set in intervals of 10 min, ranging from 60 to 180 min.

*TAR-40MAAU is required for each setting

Detects people's position

Direct/Indirect settings*

The horizontal airflow spreads across the ceiling. When set to Indirect Airflow uncomfortable drafty-feeling is eliminated completely.

*TAR-40MAAU is required for each setting.

Seasonal airflow*

When Cooling

Saves energy while keeping a comfortable effective temperature by automatically switching between ventilation and cooling. When a pre-set temperature is reached, the air conditioning unit switches to swing fan operation to maintain the effective temperature. This clever function contributes to keeping a comfortable coolness.

When Heating

The air conditioning unit automatically switches between circulator and heating. Wasted heat that accumulates near the ceiling is reused via circulation. When a pre-set temperature is reached the air conditioner switches from heating to circulator and blows air in the horizontal direction. It pushes down the warm air that has gathered near the ceiling to people's height, thereby providing smart heating.

*TAR-40MAAU is required for each setting.

PKA Model

The compact, wall-mounted indoor units offer the convenience of simple installation, and a large product line-up (A12-A36 models) ensures a best-match solution. Designed for highly efficient energy savings, the PKA Model is the answer to your air conditioning needs.

Flat Panel & Pure White Finish

A flat panel design and pure white color that harmonizes with virtually any interior.

Compact Indoor Units

Indoor unit width has been reduced by as much as 20-1/16" (A36KA7). Units take up much less space, greatly increasing installation possibilities.

*Compared to PKA-A12/18GA

*Compared to PKA-A24/30FA

*Compared to PKA-A36FA

Energy Saving Performance

SEER/HSPF has been greatly improved, realizing industry-leading energy-saving features.

Notes:

AHRI Rated Conditions
(Rated data is determined at a fixed compressor speed)

¹Cooling (Indoor // Outdoor) °F 80 DB, 67 WB // 95 DB, 75 WB
²Heating at 47°F (Indoor // Outdoor) °F 70 DB, 60 WB // 47 DB, 43 WB
³Heating at 17°F (Indoor // Outdoor) °F 70 DB, 60 WB // 17 DB, 15 WB
⁴Heating at 5°F (Indoor // Outdoor) °F 70 DB, 60 WB // 5 DB, 4 WB

⁵Indoor units receive power from outdoor units through field-supplied interconnected wiring.

⁶Wind baffles required to operate below 23°F DB in cooling mode. PUZ with wind baffle: 0° F - 115° F. Refer to wind baffle documentation for further information.

SEACOAST PROTECTION

- External Outer Panel: Phosphate coating + Acrylic-Enamel coating
- Fan Motor Support: Epoxy resin coating (at edge face)
- Separator Assembly, Valve Bed: Epoxy resin coating (at edge face)
- “Blue Fin” treatment is an anti-corrosion treatment that is applied to the condenser coil to protect it against airborne contaminants.

PVA Model

The PVA air handler is truly multi-positional offering up, down, left or right airflow, making it ideal for tight and unique spaces.

Flexibility

The PVA air handler is truly multi-positional* offering up, down, left or right airflow, making it ideal for tight and unique spaces.

High Energy Efficiency

The PVA Model has high SEER, and is highly energy efficient compared to outdated unitary air conditioners.

Interlocking Function

The PVA Model has an output terminal which allows it to interlock with other appliances such as humidifiers and dehumidifiers.

Thermostat Control

Using the Thermostat Interface (PAC-US444CN-1), the user can replace their unitary air conditioner without changing the thermostat.

*CMA accessory recommended for downflow applications.

Durability

The cabinet is made of galvanized metal with a black ZAM (zinc, aluminum, magnesium) hot dip coated steel finish. The internal fan, coil, piping and circuitry are engineered and designed to work in harmony to provide years of reliable operation.

⁵Indoor units receive power from outdoor units through field-supplied interconnected wiring.

⁶Wind baffles required to operate below 23°F DB in cooling mode. PUZ with wind baffle: 0° F - 115° F.

PEAD Model

The thin, ceiling-concealed indoor units of this model are the perfect answer for the air conditioning needs of buildings with minimum ceiling installation space and wide-ranging external static pressure. Energy-saving efficiency has been improved, reducing electricity consumption and contributing to a further reduction in operating cost.

Compact Indoor Units

The height is only 9-7/8" for all sizes of this model from 12 to 42 kBTU/H. This makes it possible for the unit to be installed in low ceilings with minimal clearance space.

External Static Pressure

External static pressure conversion can be set up to five settings. Capable of being set to a maximum of 0.60 In.W.G., units are applicable to a wide range of building types.

■ External static pressure

Model	12	18	24	30	36	42
PEAD-A AA	0.14-0.20-0.28-0.40-0.60 In. W.G.					

High Energy Efficiency

SEER/HSPF has been greatly improved, and 12,000/18,000 BTU/H models have been added to the line-up.

Built-in Drain Lift Mechanism

All models feature a built-in drain lift mechanism for removal of condensate. The unit's fail-safe mechanism recognizes when there is a high liquid level in the condensate pan and turns off the indoor fan and the outdoor unit compressor to prevent overflow.

Notes:

AHRI Rated Conditions
(Rated data is determined at a fixed compressor speed)

¹Cooling (Indoor // Outdoor)

⁶F 80 DB, 67 WB // 95 DB, 75 WB

⁵Indoor units receive power from outdoor units through field-supplied interconnected wiring.

⁶Wind baffles required to operate below 23°F DB in cooling mode. PUY with wind baffle: -40°F - 115°F. Refer to wind baffle documentation for further information.

SEACOAST PROTECTION

- External Outer Panel: Phosphate coating + Acrylic-Enamel coating
- Fan Motor Support: Epoxy resin coating (at edge face)
- Separator Assembly: Valve Bed: Epoxy resin coating (at edge face)
- “Blue Fin” treatment is an anti-corrosion treatment that is applied to the condenser coil to protect it against airborne contaminants.

Notes:

AHRI Rated Conditions

(Rated data is determined at a fixed compressor speed)

Conditions

¹Cooling (Indoor // Outdoor)

²Heating at 47°F (Indoor // Outdoor)

³Heating at 17°F (Indoor // Outdoor)

⁴Heating at 5°F (Indoor // Outdoor)

⁵Indoor units receive power from outdoor units through field-supplied interconnected wiring.

⁶Wind baffles required to operate below 23°F DB in cooling mode. PUZ with wind baffle: 0° F - 115° F. Refer to wind baffle documentation for further information.

SEACOAST PROTECTION

• External Outer Panel: Phosphate coating + Acrylic-Enamel coating

• Fan Motor Support: Epoxy resin coating (at edge face)

• Separator Assembly, Valve Bed: Epoxy resin coating (at edge face)

• “Blue Fin” treatment is an anti-corrosion treatment that is applied to the condenser coil to protect it against airborne contaminants.

 Conditions ⁴Heating at 5°F (Indoor // Outdoor) °F 70 DB, 60 WB // 5 DB, 4 WB
⁵Indoor units receive power from outdoor units through field-supplied interconnected wiring.
⁶Wind baffles required to operate below 23°F DB in cooling mode. PUZ with wind baffle: 0° F - 115° F.

PCA Model

A stylish new indoor unit design and airflow settings for both high and low ceiling interiors expand installation possibilities. Together with exceptional energy-saving performance, these units are the solution to diversified air conditioning needs.

PCA-A24/30/36/42KA7

Stylish Indoor Unit Design

A stylish square-like design is adopted for the indoor units of all models. As a result, the units blend in better with the ceiling.

High Energy Efficiency

SEER/HSPF has been greatly improved, realizing industry-leading energy-saving features.

Optional Drain Pump for All Models

The pumping height of the optional drain pump has been increased from 15-3/4" to 23-5/8", expanding flexibility in choosing unit location during installation work.

● Drain pump installation possible

Equipped with Automatic Air-speed Adjustment

In addition to the conventional 4-speed setting, units are now equipped with an automatic air-speed adjustment mode. This setting automatically adjusts the air-speed to conditions that match the room environment. At the start of heating/cooling operation, the airflow is set to high-speed to quickly heat/cool the room. When the room temperature reaches the desired setting, the airflow speed is decreased automatically for stable comfortable heating/cooling operation.

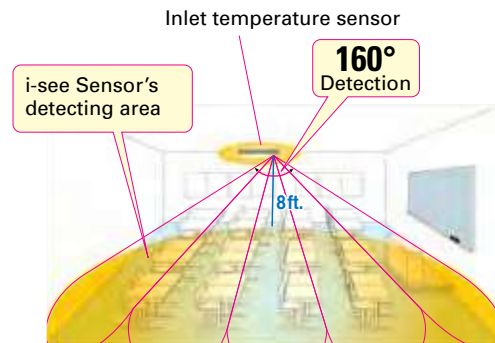

Equipped with High/Low-ceiling Modes

Units are equipped with high- and low-ceiling operation modes that make it possible to switch the airflow volume to match room height. The ability to choose the optimum airflow volume ensures even temperature distribution throughout the room.

Capacity (kBTU/H)	High ceiling (ft)	Standard ceiling (ft)	Low ceiling (ft)
24	11.5	8.9	8.2
30	11.5	8.9	8.2
36	13.8	9.8	8.5
42	13.8	9.8	8.5

i-see Sensor™ (Optional)

The i-see Sensor, an infrared sensor that detects floor temperature to improve the unevenness in room temperature. When cooling and heating, it also saves energy while keeping a comfortable effective temperature.

Notes:

AHRI Rated Conditions ¹Cooling (Indoor // Outdoor) °F 80 DB, 67 WB // 95 DB, 75 WB

(Rated data is determined at a fixed compressor speed) ²Heating at 47°F (Indoor // Outdoor) °F 70 DB, 60 WB // 47 DB, 43 WB

Conditions ³Heating at 17°F (Indoor // Outdoor) °F 70 DB, 60 WB // 17 DB, 15 WB

⁴Heating at 5°F (Indoor // Outdoor) °F 70 DB, 60 WB // 5 DB, 4 WB

⁵Indoor units receive power from outdoor units through field-supplied interconnected wiring.

⁶Wind baffles required to operate below 23°F DB in cooling mode. PUZ with wind baffle: 0° F - 115° F.

MULTI- ZONE Series

SELECTION

Choose from six types of indoor units and thirteen outdoor units that can run up to eight indoor units each.

STEP 1

SELECT INDOOR UNIT

Select the indoor unit to be installed in each room.

Wall Mounted  WPH  MSZ-EF  NTXWST	Floor Mounted  FKS	Multi-Position Air Handler  AMT	Ceiling Cassette  CKS  PLA  UKS	Ceiling Suspended  PCA Horizontal Ducted  DK5  PEAD
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

STEP 2

SELECT OUTDOOR UNIT

Select the best outdoor unit based on the number of indoor units and overall system capacity required.

2-port up to 2 indoor units  NTXMMX20A122A*	3-port up to 3 indoor units  NTXMMX24A132A* NTXMMX30A132A*	4-port up to 4 indoor units  NTXMMX36A142A*	5-port up to 5 indoor units  NTXMMX42A152A*	8-port up to 8 indoor units  NTXMMX48A182A* NTXMMX60A182A*
Pro-Heat 2-port up to 2 indoor units  NTXMPH20A122A*	Pro-Heat 3-port up to 3 indoor units  NTXMPH24A132A* NTXMPH30A132A*	Pro-Heat 4-port up to 4 indoor units  NTXMPH36A142A*	Pro-Heat 5-port up to 5 indoor units  NTXMPH42A152A*	Pro-Heat 8-port up to 8 indoor units  NTXMMX48A182A*

STEP 3

CHECK SYSTEM COMPATIBILITY

Possible combinations depends on the outdoor unit chosen. Please check the following points.

Check Indoor Units

Refer to the Indoor Unit Compatibility Table to check if the indoor units selected can be used with the outdoor unit selected. (Indoor units not listed in the table cannot be used.)

Check Indoor Unit Capacity Combination

Refer to the Combination Table to check if the capacity combination of the indoor unit selected is connectible. (Combinations not listed cannot be connected.)

If the desired combination cannot be found, please change either the indoor or outdoor unit to match one of the combinations shown in the tables.

MX Model

Advancements in the MX Models include efficiency and flexibility in system expansion capabilities. The best solution when requiring multi-system air conditioning needs.

Outdoor Unit

EXAMPLE SYSTEM

Smaller MX 2, 3, 4 and 5 ports
(example of NTXMMX42A152** system)

Refer to the multi-zone compatibility table on page 9.

Handle Up to 8 Rooms with a Single Outdoor Unit

The MX Model offers a seven-system line-up to choose from, ranging between 20,000 and 60,000 BTU/H. All of them are compatible with specific Nv- and P-Series indoor units. A single outdoor unit can handle a wide range of building layouts.

Optional Drain for All Models

With MX Model one outdoor unit can cool and heat up to eight rooms. They can be installed neatly in sites with limited space such as condominium balconies.

*Please note that cooling and heating modes cannot be run simultaneously in different rooms.

*The piping connection size differs according to the type and capacity of indoor units. Match the piping connection size for indoor and branch box. If the piping connection size of branch box does not match the piping connection size of indoor units, use optional different-diameter (deformed) joints to the branch box side. (Connect deformed joint directly to the branch box side.)

MPH Model

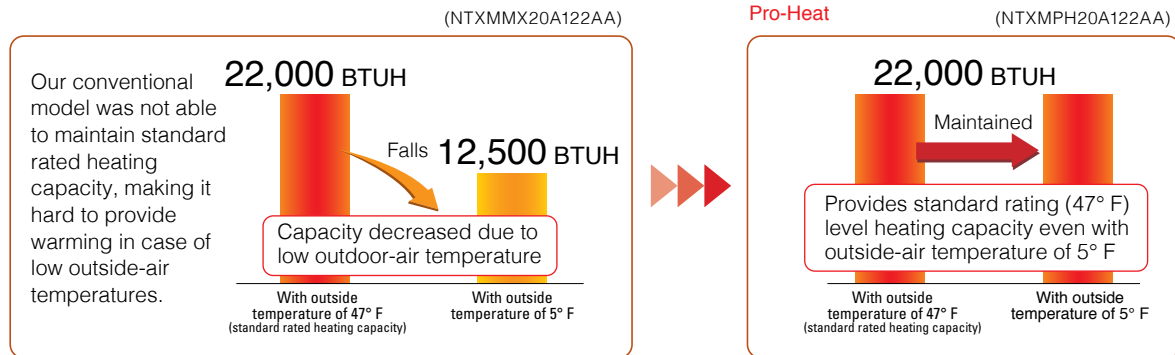

Pro-Heat

New Pro-Heat MX allows you to create an oasis of comfort throughout your home and office, in the rooms you use most, any time of the year.

Standard rated heating capacity is maintained even when the outside-air temperature drops to 5° F.

Maintains high capacity output even when outside-air temperature is low.

Can operate at outside-air temperature of -13° F

1. Incorporated key parts resistant to cold of up to -13° F after rigorous selection.
2. Printed circuit board is coated on both sides to protect it in harsh environments.

Base pan heater built-in

Prevents capacity loss and operation from stopping due to drain water freezing.

Drain water **freezes** after operation in the harsh cold

Without base heater

Pro-Heat

Does not freeze

With base heater

Continuous heating for long periods

Wasteful defrosting operation suppressed to enable more comfortable long-term continuous heating.

Extremely cold outside

Pro-Heat

MPH Model

Comfort using long-term heating mode
The unit may enter defrosting mode under certain environmental conditions, such as if outside-air humidity increases.

Information is current as of this printing. Minimum installed capacity cannot be less than 12,000 BTU/H. A minimum of two indoor units must be connected to all MX outdoor units.

*2 Only one AMT Model can be connected.

*3 Maximum of two units can be connected unless the SPTB1 is utilized to power the indoor unit.

*4 Single unit can be connected.

*5 When the system includes even 1 unit of PLA-A-EA7, the number of the maximum connectable indoor units is decreased as follows: 3 for NTXMPH36A142**, 4 for NTXMPH42A152**, and 6 for NTXMPH48A182** and NTXMMX60A182**.

*6 Maximum of 3 horizontal ducted indoor units (PEAD or DKS) can be connected.

*7 Maximum of 2 horizontal ducted indoor units (PEAD or DKS) can be connected.

For more information, please refer to the service manual, application 1029 and the full compatibility chart on Trane.MyLinkDrive.com.

MPH Model *1

Pro-Heat

Possible combinations of outdoor units and indoor units are shown below.

Information is current as of this printing. Minimum installed capacity cannot be less than 12,000 BTU/H. A minimum of two indoor units must be connected to all MX outdoor units.

*2 Only one AMT Model can be connected.

*3 Maximum of two units can be connected unless the SPTB1 is utilized to power the indoor unit.

*4 Single unit can be connected.

*5 When the system includes even 1 unit of PLA-A-EA7, the number of the maximum connectable indoor units is decreased as follows: 3 for NTXMPH36A142**, 4 for NTXMPH42A152**, and 6 for NTXMPH48A182** and NTXMMX60A182**.

*6 Maximum of 3 horizontal ducted indoor units (PEAD or DKS) can be connected.

*7 Maximum of 2 horizontal ducted indoor units (PEAD or DKS) can be connected.

For more information, please refer to the service manual, application 1029 and the full compatibility chart on Trane.MyLinkDrive.com.

Conditions for Specifications

Temperature conditions are based on AHRI 210/240.

Cooling	Indoor	D.B. 80° F (27° C), W.B. 67° F (19° C)
	Outdoor	D.B. 95° F (35° C), W.B. 75° F (24° C)
Heating	Indoor	D.B. 70° F (21° C), W.B. 60° F (16° C)
	Outdoor	D.B. 17° F (-8° C), W.B. 15° F (-9° C)

Refrigerant piping length: 16ft.

The figures for total input are based on the following voltages.

Series	Indoor unit	Outdoor unit
Nv-Series P-Series MX Model	–	208 / 230V • Single phase • 60Hz

Sound pressure level

- The sound pressure measurement is conducted in an anechoic chamber.
- The actual sound level depends on the distance from the unit and the acoustic environment.

Piping Installation

MX Model

NTXMPH36A142AA, NTXMPH42A152AA, NTXMPH48A182AA,
NTXMMX48A182AA, NTXMMX60A182AA

Permissible length (one-way)	Total piping length	$c1 + b1 + b2 + a1 + a2 + a3 + a4 + a5 + a6 + a7 + a8 \leq 150 \text{ m (492 ft.)}$
	Farthest piping length (L) *1	$c1 + b2 + a8 \leq 80 \text{ m (262 ft.)}$
	Piping length between outdoor unit and branch boxes	$c1 + b1 + b2 \leq 55 \text{ m (180 ft.)}$
	Farthest branch box from the first joint (b2)	$b2 \leq 30 \text{ m (98 ft.)}$
	Farthest piping length after branch box (I)	$a8 \leq 25 \text{ m (82 ft.)}$
	Total piping length between branch boxes and indoor units	$a1 + a2 + a3 + a4 + a5 + a6 + a7 + a8 \leq 95 \text{ m (311 ft.)}$
Permissible height difference (one-way)	In indoor/outdoor section (H) *2	$H \leq 50 \text{ m (164 ft.) (In case of outdoor unit is set higher than indoor unit)}$ $H \leq 40 \text{ m (131 ft.) (In case of outdoor unit is set lower than indoor unit)}$
	In branch box/indoor unit section (h1)	$h1 + h2 \leq 15 \text{ m (49 ft.)}$
	In each branch unit (h2)	$h2 \leq 15 \text{ m (49 ft.)}$
	In each indoor unit (h3)	$h3 \leq 12 \text{ m (39 ft.)}$
	Number of bends	$ c1 + b1 + a1 , c1 + b1 + a2 , c1 + b1 + a3 , c1 + b1 + a4 , c1 + b1 + a5 , c1 + b2 + a6 , c1 + b2 + a7 , c1 + b2 + a8 \leq 15$

*1 The piping specification table does not provide a minimum line set length. However, indoor units with connected piping length less than 16 ft. (5 m) could produce intermittent noise during normal system operation in very quiet environments. Please be aware of this important information when installing and locating the indoor unit within the conditioned space.

*2 Branch box should be placed within the level between the outdoor unit and indoor units.

Explanation of Terminology

Maximum piping length:

This is the maximum allowable length of the refrigerant piping. The amount of refrigerant pipe used cannot be longer than the length specified.

► Total length:

The maximum allowable combined length of all the refrigerant piping between the outdoor unit and indoor unit(s).

► Outdoor Unit - Indoor Unit:

The maximum allowable length of the refrigerant piping between the outdoor unit and indoor units installed when multiple units are connected to a single outdoor unit. This distance limitation refers to the maximum length between the outdoor unit and the farthest indoor unit.

► Pipe length difference from distribution pipe:

The maximum allowable difference in refrigerant piping length from the distribution pipe to the farthest indoor unit and from the distribution pipe to the closest indoor unit when multiple indoor units are connected to a single outdoor unit using a distribution pipe.

► Indoor Unit - Distribution Pipe:

The maximum allowable length of the refrigerant piping between indoor units and the distribution pipe when multiple indoor units are connected to a single outdoor unit.

Maximum height difference:

This is the maximum allowable height difference. It is necessary to install the air conditioning system so that the height distance is no more than the difference specified. (Specified differences may vary if the outdoor unit is installed higher or lower than the indoor units).

► Outdoor unit - Indoor unit:

The maximum allowable difference in height between the outdoor unit and indoor units when installed (when multiple indoor units are connected to a single outdoor unit, this distance limitation refers to the maximum height difference between the outdoor unit and an indoor unit).

► Indoor unit - Indoor unit:

The maximum allowable difference between the heights of indoor units when multiple indoor units are connected to a single outdoor unit.

Maximum number of bends:

This is the maximum allowable number of bends in the refrigerant piping. The total number of bends in the refrigerant piping used cannot exceed the number specified.

► Total number:

The maximum allowable number of bends for all refrigerant piping between the outdoor unit and indoor units.

► Outdoor unit - Indoor unit:

The maximum allowable number of bends between the outdoor unit and each indoor unit when multiple indoor units are connected to a single outdoor unit.

To ensure full capacity in cold and snowy regions...

3 IMPORTANT POINTS TO REMEMBER WHEN INSTALLING THE OUTDOOR UNIT

Wind and snow can significantly reduce capacity.

Be sure to check the information below and install the outdoor unit correctly.

1 Installation Location

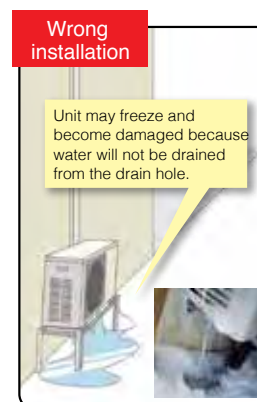

Be aware of the prevailing wind direction in winter and install the outdoor unit where it is as sheltered as possible.

2 Measures for Drainage of Water

Case 1: Unit is installed close to passage (walkway)

Do not install the unit close to passage as drainage water from the unit may freeze and cause a slipping hazard.

Case 2: Multiple units are installed

Do not install units on top of one another as it may cause frozen drainage water on the bottom unit.

3

Measures for Snow

Do not install the unit on the ground

To avoid the adverse effects of snow and frozen drainage water, install the unit on a stand to ensure a sufficient height from the ground.

Correct installation

Note

- ① Install at a position/height to prevent the unit being buried in snow*¹ and the adverse effects of frozen drainage water.*²
- ② Install so as to avoid the effects of snow or snowdrift.
- ③ Install so as to avoid the damage from falling snow or icicles.

*¹ Install at a height above the highest snowfall depth.
 *² Even for correct installations, dripping drainage water may form an icicle which needs to be cleared away regularly to prevent a blocked drainage outlet.

Wrong installation

Unit may become buried in snow due to heavy snowfall, snow sliding off the roof or snowdrift.

Wrong installation

Unit may be damaged due to snowfall or icicles.

Use a stand to add sufficient height to protect the unit heat exchanger from snow and prevent icicles forming during defrost operation.

Correct installation

Minimum height (h) should be higher than the highest snowfall depth (h0) **+7.8 in.**

Wrong installation

Unit may become covered in snow if the stand height is insufficient.

Install snow protection hood as necessary

Correct installation

Note
 Install the snow protection hood or other cover in snowy regions.

Recommended accessories (drain socket & centralized drain pan, stand, snow protection hood, base heater)

	Snowy region	Cold region	Remarks
	Countermeasures for snow	Countermeasures for freezing	
Drain socket, Centralized drain pan	Not used	Not used	Prevents freezing
Stand	Needed	Needed	1. Install so as to prevent the unit being buried in snow (at a height greater than the highest snowfall depth). Be sure that the stand does not obstruct drainage. 2. Install so as to prevent damage to the unit due to frozen drainage water (icicles).
Snow protection hood	Needed *When the installation position is subject to snowfall.	—	1. Prevents heat exchanger from being covered in snow. 2. Prevents snow accumulating inside the air duct.
Base heater	—	Needed	Outdoor units equipped with a heater for cold regions are those with an "H" in the model name. For the cold-climate zone, use of a unit with a heater is strongly recommended. Even for the moderate-climate zone use of a unit with a heater is recommended for regions subject to high humidity in winter.

CAUTION About disposal of drainage water

When the unit is installed in cold or snowy regions :

Drainage water may freeze in the drain socket/hose and prevent the fan from rotating.

Do not attach a drain socket packaged as an accessory to the unit.

* In the case that fitting a drain socket is absolutely necessary, steps must be taken so that the drainage water does not freeze.
 For more information, please consult Mitsubishi Electric Trane HVAC US or one of its dealers/resellers.

Arrangement for snow protection hood

Separately sold parts are available for some models.
 Please consult Mitsubishi Electric Trane HVAC US or one of its dealers/resellers at the time of purchase for details.

System Control

Versatile system controls can be achieved by using optional parts, relay circuits, control panels, etc.

Set time can be changed from 30 min. to 4 hr. at 10 min. intervals. *Simple Timer and Auto-off Timer cannot be used at the same time. 	Standard functions of TAR-40MAAU

Other Optional Parts

Part Name	Description
Deodorizing Filter Captures small foul-smelling substances in the air.	 Deodorising filter
Air cleaning Filter Removes fine dust particles from the air by means of static electricity.	 Air cleaning filter
Silver-ionized Air Purifier Filter Captures the bacteria, pollen and other allergens in the air and neutralizes them.	 Silver-ionized Air Purifier Filter
Oil Mist Filter Element Filter element (12 pieces) that blocks the oil mist for ceiling-suspended models used in professional kitchens.	 Oil mist filter
High-efficiency Filter Element Element for high-efficiency filter. Removes fine dust particles from the air.	 *For 4-way cassette units (PLA)
Shutter Plate Plate for blocking an air outlet of the 4-way cassette (PLA) indoor unit.	 Shutter Plate
Multi-functional Casement Casement for fresh-air intake and attaching the high-efficiency filter element (optional).	 Indoor unit body Multi-functional casement
Space Panel Decorative cover for the installation when the ceiling height is low.	 Space Panel Panel
Drain Pump Pumps drain water to a point higher than that where the unit is installed.	 Drain pump *for ceiling-suspended units

Part Name	Description
MAC-334IF-E System Control Interface Interface for connecting with the PAR-40MAAU remote controller and PACYT53CRAU, and to relay operation signals.	 MAC-334 System Control Interface
Interface to connect with M-NET controllers.	 MAC-334IF-E
kumo cloud® Wireless Interface 2 Interface enabling users to control air conditioners and check operating status via devices such as personal computers, tablets and smart phones.	 Wireless Interface 2 Smartphone
CN24 Relay Kit This product is an adaptor which inputs the incoming signals from an open/close switch to the air conditioner and outputs the on/off signals from the air conditioner to the back-up heater.	 Switch Relay
Deluxe MA Wired Controller Advanced deluxe remote controller with full dot liquid-crystal display and backlight. Equipped with convenient functions like night setback.	
Simple MA Wired Controller Remote controller with liquid-crystal display, and backlight function for operation in dark location.	
Remote Controller Terminal Block Kit for PKA The terminal block is used as a relay to wire an indoor unit and to two remote controllers or to wire a remote controller and multiple indoor units in order to perform group control.	
Wireless Remote Controller Signal Sender Handheld unit for sending operation signals to the indoor unit.	 Handheld unit
Wireless Remote Controller Signal Receiver Receives operation signals from the wireless remote controller handheld unit.	 Signal receiver

Part Name	Description
Wireless Remote Controller Kit (Sender & Receiver) Remote controller handheld unit (signal sender) and receiver (signal receiver) for ceiling-suspended units.	
Control Holder Holder for storing the remote controller.	
Remote Sensor Sensor to detect the room temperature at remote positions.	
PAC-715AD Remote On/Off Adapter Connector for receiving signals from the local system to control the on/off function.	
Remote Operation Adapter Adapter to display the operation status and control on/off function from a distance.	
PAC-725AD Connector Plug for Remote Display Connector used to display the operation status and control on/off function from a distance.	
Distribution Pipe Branch pipe for P Series simultaneous multi-system use, or to connect two branch boxes for MXZ.	 <p>*P Series with 2 indoor units</p>
Joint Pipe Part for connecting refrigerant pipes of different diameters.	
Branch Box Outer Cover Casement for branch boxes.	

Part Name	Description
Air Protection Guide/Wind Baffle Protects the outdoor unit from the wind.	
Drain Socket A set of caps to cover unnecessary holes at the bottom of the outdoor unit, and a socket to guide drain water to the local drain pipe.	
Centralized Drain Pan Catches drain water generated by the outdoor unit.	
M-NET Converter Used to connect P Series A-control models to M-NET controllers.	
Control/Service Tool Monitoring tool to display operation and self-diagnosis data.	
Air Discharge Guide Changes the direction of air being exhausted from the outdoor unit.

for a greener tomorrow

Eco Changes is the Mitsubishi Electric Group's environmental statement, and expresses the Group's stance on environmental management. Through a wide range of businesses, we are helping contribute to the realization of a sustainable society.

⚠ NOTICE

Do not install indoor units in areas (e.g. mobile phone base stations) where the emission of VOCs such as phthalate compounds and formaldehyde is known to be high as this may result in a chemical reaction

Our air-conditioning equipment and heat pumps contain a fluorinated greenhouse gas, R410A

When installing or relocating or servicing our air-conditioning equipment, use only the specified refrigerant (R410A) to charge the refrigerant lines

Do not mix it with any other refrigerant and do not allow air to remain in the lines

If air is mixed with the refrigerant, then it can be the cause of abnormal high pressure in the refrigerant lines, and may result in an explosion and other hazards

The use of any refrigerant other than that specified for the system will cause mechanical failure, system malfunction or unit breakdown. In the worst case, this could lead to a serious impediment to securing product safety
