

THERMOSTATIC EXPANSION VALVES

10 Outstanding Features & Benefits of Sporlan Thermostatic Expansion Valves

- **Selective Thermostatic Charges** Designed to provide optimum performance for all applications—air conditioning and heat pump, medium and low temperature refrigeration.
- **Thermostatic Element Design** Long lasting and field proven stainless steel diaphragm and welded element construction.
- **Diaphragm Design** Large flat diaphragm permits precise valve control.
- **Replaceable Thermostatic Elements** Field replaceable elements on all standard valves.
- **Balanced Port Design** Provides perfect pin and port alignment, and prevents changes in pressure drop across the valve from influencing valve operation. Provides excellent control on applications with widely varying operating conditions.
- **Pin Carrier Design (Conventional Valves)** Provides precise pin and port alignment, and tighter seating.
- **Accessible Internal Parts** Durable, leakproof body joint construction allows the valve to be disassembled, and the internal parts cleaned and inspected.
- **Materials of Construction** Pin and port materials offer maximum protection against corrosion and erosion.
- **Silver Soldered Connections** For leakproof, high strength connection-to-body joints.
- **Adjustable Superheat Design** All standard valves are externally adjustable.

Valve Nomenclature/Ordering Instructions

Combine the letters and numbers in the following manner to obtain the complete valve designation. Also include all connection sizes and the capillary tube length.

EXAMPLE

| 0 | Z | E | 35 | GA | 7/8" ODF SOLDER | X | 1-1/8" ODF SOLDER | X | 1/4" ODF SOLDER | X | 5' |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|--------------------------|---------------------|---------------------------------|---|----------------------------------|---|----------------------------------------------|---|----------------------------------------|
| Body Type | Sporlan Code – Refrigerant Element Label Color Code V = R-22 Green J = R-134a Blue S = R-404A Orange N = R-407C Lt. Brown F = R-409A Yellow Z = R-410A Rose P = R-507 Teal | "E" specifies external equalizer. Omission of letter "E" indicates valve with internal equalizer. | Nominal Capacity in Tons | Thermostatic Charge | Inlet Connection Size and Style | | Outlet Connection Size and Style | | External Equalizer Connection Size and Style | | Capillary Tubing Length Inches or Feet |

* APPLICATION FACTORS:

- The Type ZP charges have essentially the same characteristics as the Type Z charge with one exception: they produce a pressure limit Maximum Operating Pressure (MOP). ZP charges are not intended as replacements for Z charges. Each should be selected for its own unique purpose.
- All air conditioning and heat pump charges are intended for use with externally equalized valves.
- Type L liquid charges are also available for most commonly used refrigerants in most element sizes.
- If in doubt as to which charge to use, contact your nearest Sporlan Sales Office with complete system data.
- The Type X charges are not to be used with "EBS" and "O" valves.

THERMOSTATIC EXPANSION VALVES

Quick Reference Guide

| VALVE TYPE | SPECS | NOMINAL CAPACITY RANGE (kW) | | | | CONNECTION TYPES | VALVE DESCRIPTION AND APPLICATION |
|-----------------------------------------------------------------------------------------------------|-----------|-----------------------------|----------------|----------------|----------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | R-22 | R-134a | R-404A & R-507 | R-410A | | |
| FB  | Page 6 | 0.88 thru 14 | 0.44 thru 10.5 | 0.44 thru 12.3 | — | ODF Solder | Small brass body valve available only with straight through connections and external adjustment. The thermostatic element is not replaceable on valves manufactured prior to 1994. Current models use a replaceable No. 43 element. Typical applications: small capacity air conditioning and refrigeration applications where an external adjustment is desired. Not available for R-410A. |
| R  | Page 7 | 3.5 thru 42 | 1.8 thru 31.5 | 1.8 thru 31.5 | 4.2 thru 50.8 | ODF Solder | Small brass body valve available with either angle style or straight through connection pattern. R valves are only available externally adjustable. The R has a balanced port construction, which makes it ideal for applications with a wide range of operating conditions. The design also provides exceptional control of refrigerant in both directions, making the R valve an excellent choice for heat pumps. |
| RC  | Page 8 | 3.5 thru 21 | — | — | 4.2 thru 25.2 | ODF Solder | In addition to the features described above for the R valve, the RC has a built-in check valve to allow bypass flow in the reverse direction. This feature makes this valve type ideally suited for heat pump applications. RC valves are only available externally adjustable. |
| Q/BQ  | Page 9-11 | 1.2 thru 17.5 | 0.58 thru 8.8 | 0.58 thru 10.5 | 1.5* thru 21.8 | SAE Flare | The brass body Q valve is externally adjustable with a removable cartridge or orifice. The valve body, cartridge and thermostatic element can be supplied as independent components. This allows body, cartridge and element to be assembled and matched to specific system requirements. Inlet connection has a 100 mesh removable strainer screen. Typical applications: Refrigeration applications and external equalized versions may be used on air conditioning. Type BQ same as above, with balanced port construction. *BQ only |
| EQ/EBQ  | Page 9-11 | 1.2 thru 17.5 | 0.58 thru 8.8 | 0.58 thru 10.5 | 1.5* thru 21.8 | Extended ODF Solder | Type EQ same as the Type Q except it features extended ODF connections. A 100 mesh insert strainer is provided with the valve. Type EBQ same as EQ with balanced port construction. *EBQ only |
| SQ/SBQ  | Page 9-11 | 1.2 thru 17.5 | 0.58 thru 8.8 | 0.58 thru 10.5 | 1.5* thru 21.8 | Extended ODF Solder | Type SQ same as the Type Q valve except it features ODF solder connections and a forged brass inlet fitting with a removable 100 mesh strainer screen which can be cleaned and/or replaced without removing the valve from the line. Type SBQ same as SQ with balanced port construction. *SBQ only |

THERMOSTATIC EXPANSION VALVES

Quick Reference Guide

| VALVE TYPE | SPECS | NOMINAL CAPACITY RANGE (kW) | | | | CONNECTION TYPES | VALVE DESCRIPTION AND APPLICATION |
|------------|---------------------------------------------------------------------------------------------|-----------------------------|----------------|----------------|-------------|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | R-22 | R-134a | R-404A & R-507 | R-410A | | |
| S |  Page 12 | 7 thru 52.5 | 7 thru 35 | 7 thru 35 | — | ODF Solder | Brass bar body, externally adjustable valve. Inlet has a permanent 12 mesh strainer. General purpose valve for air conditioning and refrigeration applications. |
| EBS |  Page 13 | 28 thru 70 | 17.5 thru 42 | 21 thru 46 | — | Extended ODF Solder | Same physical size as the Type S valve except it features extended ODF connections and a balanced port construction. |
| O |  Page 14 | 70 thru 315 | 42 thru 210 | 42 thru 193 | 70 thru 210 | ODF Solder | Brass bar body, externally adjustable valve. Inlet has a permanent 12 mesh strainer. This valve features a balanced port construction, and it is suitable for both air conditioning and refrigeration applications. The valve can also be ordered as a bi-directional valve, allowing control of flow in both direction for use on heat pump applications. |
| H |  Page 16 | 8.8 thru 70 | 5.3 thru 42 | 5.3 thru 42 | — | ODF Solder or FPT Flange | Brass bar body, externally adjustable valve with flange connections. Inlet flange bushing has a permanent 16 mesh strainer. The FPT flange connection requires the K-1178 adapter kit. This valve provides the smallest capacity TEVs with flange connections and it is suitable for both air conditioning and refrigeration applications. |
| M |  Page 17 | 73.5 thru 147 | 52.5 thru 87.5 | 52.5 thru 105 | — | ODF Solder or FPT Flange | Cast bronze body, externally adjustable valve with flange connections. Inlet has a 12 mesh strainer. This valve type provides valve capacities greater than the Type H and it is suitable for air conditioning and refrigeration applications. Flanges for the Type M valve are interchangeable with the Type V valve. |
| V |  Page 18 | 182 thru 350 | 123 thru 193 | 133 thru 245 | — | ODF Solder or FPT Flange | Cast bronze body, externally adjustable valve with flange connections. Inlet has a 12 mesh strainer. This valve type features a dual port semi-balanced design. This valve type provides valve capacities greater than the Type M and is suitable for air conditioning and refrigeration applications. Flanges for the Type V are interchangeable with the Type M. |
| W |  Page 19 | 473 thru 630 | 280 thru 385 | — | — | ODF Solder Flange | Cast bronze body, externally adjustable valve with flange connections. Inlet has a 12 mesh strainer. This valve type features a dual port semi-balanced design and it is primarily for large capacity chillers. This valve type provides the largest valve capacities available for flange connection TEVs. |

THERMOSTATIC EXPANSION VALVES

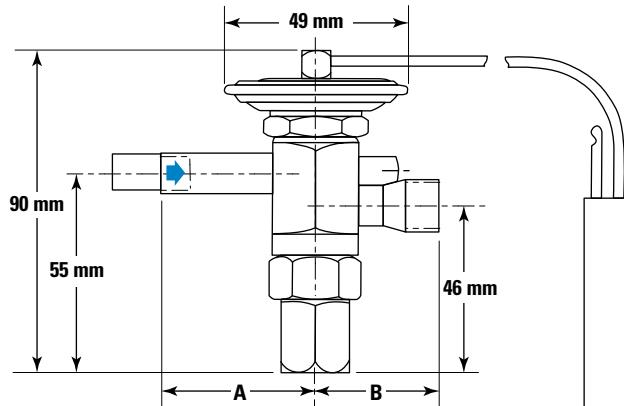

22, 134a, 404A, 407C, 409A 507

Type FB — Knife Edge Joint

Standard Cap Tube Length 30 inches

(760 mm)

The Type FB valve is an externally adjustable valve designed primarily for use in small capacity refrigeration applications. This valve may also be applied on residential and small commercial air conditioning, and heat pump units. Not available for R-410A.

THERMOSTATIC EXPANSION VALVES

22, 134a, 404A, 407C, 409A, 410A, 507

Type RE — Knife Edge Joint
Standard Cap Tube Length 60 inches
(1.5 m)

The Type RE valve is a small balanced port valve designed for use on refrigeration applications as well as residential and small commercial air conditioning and heat pump units. The balanced port design provides exceptional control of refrigerant in both directions, making this valve an excellent choice for heat pump systems.

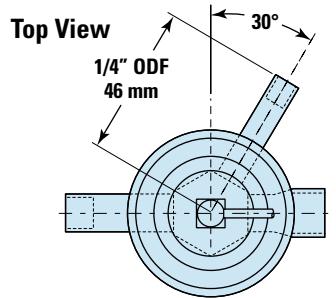

Dimensions — Connections

| VALVE TYPE | FITTING SIZE Inches | mm | | | |

① Valves are also available as special order with SAE connections.

Note: Valves with SAE inlet and outlet fittings are available only with the 1/4" SAE flare external equalizer; valves with ODF fittings are available only with the 1/4" ODF external equalizer.

Note: Valves can be supplied with internal equalizer on valves with nominal capacity of 2 or less.

THERMOSTATIC EXPANSION VALVES

22, 407C, 410A

Type RCE — Knife Edge Joint

**Standard Cap Tube Length 30 inches
(760 mm)**

Type RC valves contain internal check valves to allow reverse flow on heat pump applications. This eliminates the need for an external check valve piped around the TEV for reverse flow. The RC valve can be used on Heat Pump and Air Conditioning (cooling only) applications.

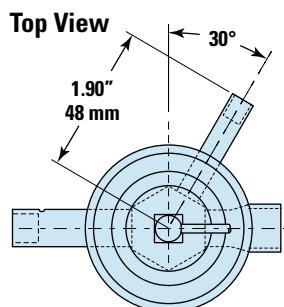

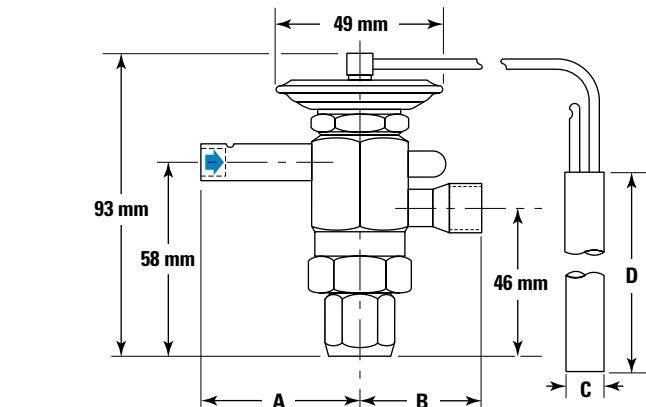

Exact replacement valves for the CBI, CBBI, BI, and I valves are available from the OEM and should be ordered from the OEM during the warranty period of the equipment, or when special features such as specific bleed ports, connections, configurations, capillary tube lengths, etc. are required.

Replaceable elements available for these valves are the following: R-22, Element Kit Number KT-43-VGA-30", and R-410A, Element Kit Number KT-45-ZGA-30".

The Type RC thermostatic expansion valves are only available with the specifications shown below.

② Valves with SAE inlet and outlet fittings are available only with the 1/4" SAE flare external equalizer; valves with ODF fittings are available only with the 1/4" ODF external equalizer.

③ Valves with Chatleff fittings are available only with the 1/8" OD x 24" long tube with flare and nut external equalizer.

THERMOSTATIC EXPANSION VALVES 22, 134a, 404A, 407C, 409A, 410A, 507

Type Q and BQ

The Series Q and BQ are replaceable cartridge style thermostatic expansion valves, available in both conventional (Type Q) and balanced port (Type BQ) configurations. These valves can be supplied as a complete valve or as three component parts, body, cartridge, and thermostatic element. They are designed for small refrigeration systems, including refrigerated cases, coolers and freezers, and are also well suited for air conditioning and heat pump duty.

| | Nominal Capacity (kW) | | | | | Cartridge | | |

① Valves listed in this column NOT AVAILABLE with MOP Type air conditioning charges.

② ODF Solder indicates a female connection on the valve of proper diameter to receive copper tubing of corresponding OD size. Thus 5/8" ODF will receive 5/8" OD tubing.

Note: S Valves not available for R-410A.

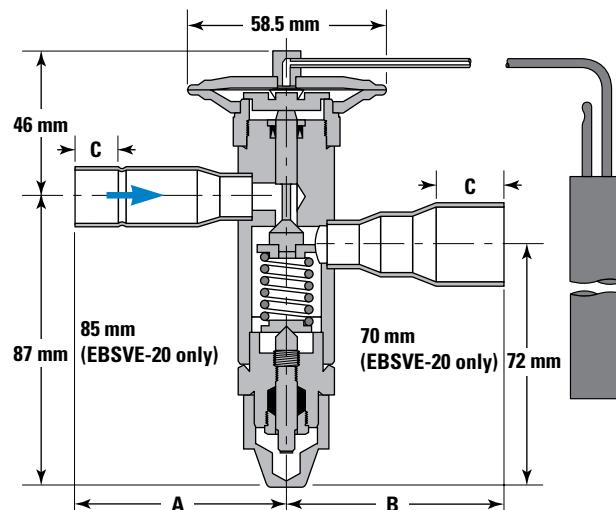

THERMOSTATIC EXPANSION VALVES

22, 134a, 404A, 407C, 409A, 507

Type EBS

**Standard Cap Tube Length 60 inches
(1.5 m)**

Sporlan Type EBS valve is a brass bar body valve having the same physical size as the Type S valve except the Type EBS features a balanced port construction and extended ODF connections. The thermostatic element is replaceable. The balanced port construction makes this valve ideally suited for refrigeration and air conditioning applications which operate over widely varying conditions.

① ODF Solder indicates a female connection on the valve of proper diameter to receive copper tubing of corresponding OD size. Thus 5/8" ODF will receive 5/8" OD tubing.

* X charge not available.

Note: Not suitable for bi-directional flow control.

THERMOSTATIC EXPANSION VALVES

22, 134a, 404A, 407C, 409A, 410A, 507

Type O

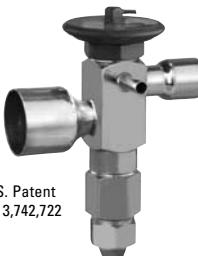

Standard Cap Tube Length 60 inches

(1.5 m)

Sporlan Type O valve is a brass bar body, externally adjustable valve with ODF solder connections. The thermostatic element is replaceable, and the inlet connection has a permanent 12 mesh strainer. This valve type features a balanced port construction, and it is designed for both air conditioning and refrigeration applications. A synthetic seating surface provides tight shut-off during system off periods.

This valve type has two body styles: a small body which provides capacities up to 133 kW R-407C, and a large body which extends capacities to 315 kW R-407C.

The valve can also be ordered as a bi-directional valve, allowing control of flow in both directions for use on heat pump applications.

^① Connections shown are most readily available. Connections shown in Bulletin 10-10 are also available on special order.

^② Valves listed in this column NOT AVAILABLE with MOP Type air conditioning charges.

^③ Standard External Equalizer Connection 1/4" SAE Flare, 1/4" ODF Solder connection available on request.

^④ ODF Solder indicates a female connection on the valve of proper diameter to receive copper tubing of corresponding OD size. Thus 1/2" ODF will receive 1/2" OD tubing.

^⑤ Tubing lengths other than standard available upon special order at an additional cost.

NOTE: The H valve is not available for R-410A.

External Equalizer Connection is required whenever valves are used with Sporlan Refrigerant Distributors.

THERMOSTATIC EXPANSION VALVES

22, 134a, 404A, 407C, 409A, 507

Type M

Cast bronze body, externally adjustable valve with flange connections. Inlet has a 12 mesh strainer. This valve type provides valve capacities greater than the Type H and it is suitable for air conditioning and refrigeration applications. Flanges for the Type M valve are interchangeable with the Type V valve.

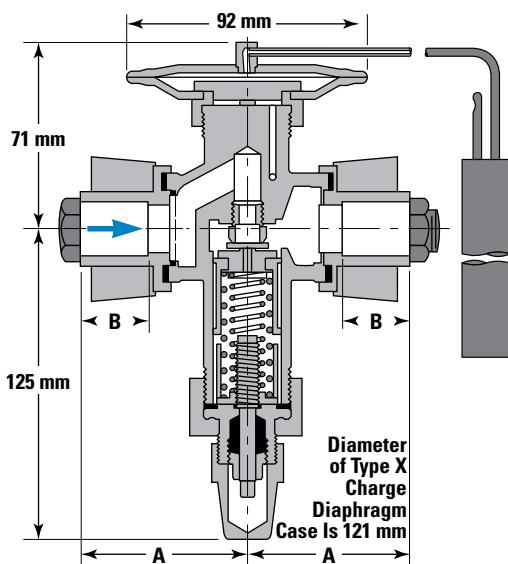

Dimensions — Connections

THERMOSTATIC EXPANSION VALVES

22, 134a, 404A, 407C, 409A, 507

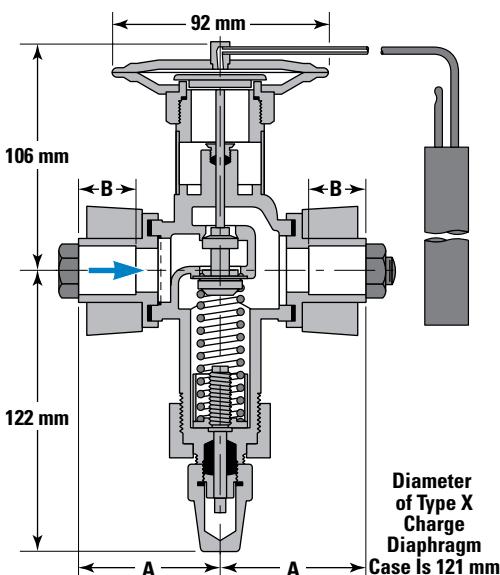

Type V

Cast bronze body, externally adjustable valve with flange connections. Inlet has a 12 mesh strainer. This valve type features a dual port semi-balanced design. This valve type provides valve capacities greater than the Type M and is suitable for air conditioning and refrigeration applications. Flanges for the Type V are interchangeable with the Type M.

THERMOSTATIC EXPANSION VALVES

22, 134a, 407C, 409A

Type W

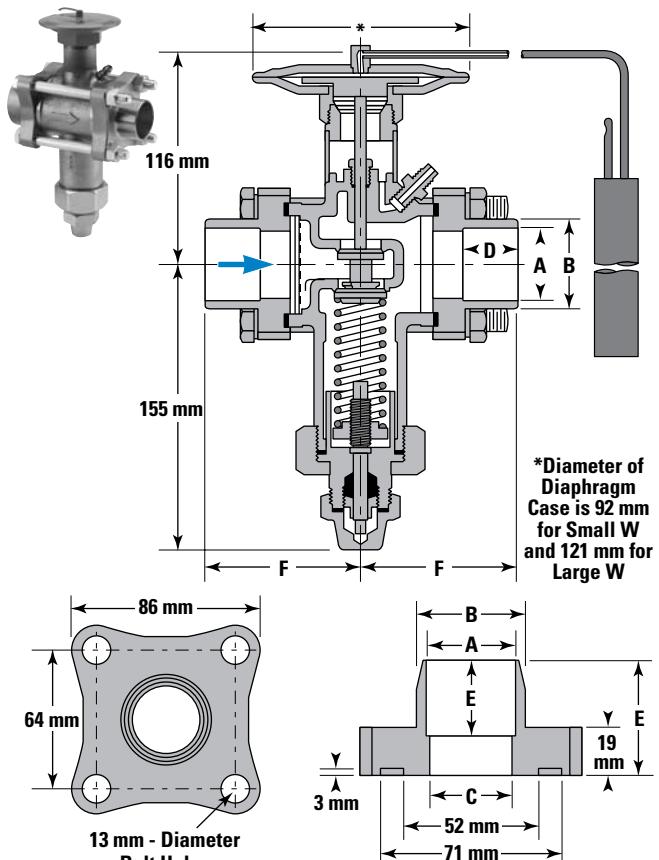

Cast bronze body, externally adjustable valve with flange connections. Inlet has a 12 mesh strainer. This valve type features a dual port semi-balanced design and it is primarily for large capacity chillers. This valve type provides the largest valve capacities available for flange connection TEVs.

Dimensions — Connections

| BQ-EBO-SBQ | C | 11 | 12.3 | 13.1 | 12.0 | 12.3 | 13.3 | | |

| REFRIGERANT | LIQUID TEMPERATURE ENTERING TEV °C | | | | | | |
|-------------|------------------------------------|------|------|------|------|------|------|
| | -10° | 0° | 10° | 20° | 30° | 40° | 50° |
| 134a | 1.64 | 1.52 | 1.39 | 1.26 | 1.13 | 1.00 | 0.87 |
| 409A | 1.51 | 1.41 | 1.31 | 1.21 | 1.11 | 1.00 | 0.89 |

These factors include corrections for liquid refrigerant density and net refrigerating effect and are based on an evaporator temperature of -15°C. However, they may be used for any evaporator temperature from -15°C to 5°C since the variation in the actual factors across this range is insignificant.

| REFRIGERANT | EVAPORATOR TEMPERATURE °C | PRESSURE DROP ACROSS TEV (bar) | | | | | | |
|-------------|---------------------------|--------------------------------|------|------|------|------|------|------|
| | | 2 | 4 | 6 | 8 | 10 | 12 | 14 |
| 134a | 5° | 0.71 | 1.00 | 1.22 | 1.41 | 1.58 | 1.73 | 1.87 |
| 409A | -5° & -15° | 0.58 | 0.82 | 1.00 | 1.15 | 1.29 | 1.41 | 1.53 |

TEV Capacity = TEV Rating x CF Liquid Temperature x CF Pressure Drop — Example: Actual capacity of a nominal 1-1/2 ton R-134a Type FB valve at -5°C evaporator, 8 bar pressure drop across the TEV, and a 30°C liquid temperature entering the TEV = 7.01 (from rating chart) x 1.13 (CF liquid temperature) x 1.15 (CF pressure drop) = 9.11 kW.

| REFRIGERANT | LIQUID TEMPERATURE ENTERING TEV °C | | | | | | |
|-------------------------------------------------|------------------------------------|------|------|------|------|------|------|
| | -10° | 0° | 10° | 20° | 30° | 40° | |
| CORRECTION FACTOR, CF LIQUID TEMPERATURE | | | | | | | |
| 22 | 1.52 | 1.42 | 1.32 | 1.21 | 1.11 | 1.00 | 0.89 |
| 407C | 1.73 | 1.59 | 1.45 | 1.30 | 1.15 | 1.00 | 0.84 |

These factors include corrections for liquid refrigerant density and net refrigerating effect and are based on an evaporator temperature of -15°C. However, they may be used for any evaporator temperature from -15°C to 5°C since the variation in the actual factors across this range is insignificant.

| EVAPORATOR TEMPERATURE °C | PRESSURE DROP ACROSS TEV (bar) | | | | | | | |
|--------------------------------------------|--------------------------------|------|------|------|------|------|------|------|
| | 2 | 4 | 6 | 8 | 10 | 12 | 14 | 16 |
| CORRECTION FACTOR, CF PRESSURE DROP | | | | | | | | |
| 5° | 0.58 | 0.82 | 1.00 | 1.15 | 1.29 | 1.41 | 1.53 | 1.63 |
| -5° & -15° | 0.50 | 0.71 | 0.87 | 1.00 | 1.12 | 1.22 | 1.32 | 1.41 |
| -20° & -30° | 0.45 | 0.63 | 0.77 | 0.89 | 1.00 | 1.10 | 1.18 | 1.26 |
| -40° | 0.41 | 0.58 | 0.71 | 0.82 | 0.91 | 1.00 | 1.08 | 1.15 |

TEV Capacity = TEV Rating x CF Liquid Temperature x CF Pressure Drop — Example:
Actual capacity of a nominal 1-1/2 ton R-22 Type FB valve at -5°C evaporator, 10 bar pressure drop across the TEV, and a 30°C liquid temperature entering the TEV = 6.78 (from rating chart) x 1.11 (CF liquid temperature) x 1.12 (CF pressure drop) = 8.43 kW.

THERMOSTATIC EXPANSION VALVES

404A, 507

| REFRIGERANT | LIQUID TEMPERATURE ENTERING TEV °C | | | | | | | |
|-------------------------------------------------|------------------------------------|------|------|------|------|------|------|------|
| | -10° | 0° | 10° | 20° | 30° | 40° | | |
| CORRECTION FACTOR, CF LIQUID TEMPERATURE | | | | | | | | |
| 404A | 1.98 | 1.79 | 1.60 | 1.41 | 1.21 | 1.00 | 0.79 | 0.56 |
| 507 | 1.92 | 1.74 | 1.56 | 1.37 | 1.19 | 1.00 | 0.79 | 0.54 |

These factors include corrections for liquid refrigerant density and net refrigerating effect and are based on an evaporator temperature of -15°C. However, they may be used for any evaporator temperature from -15°C to 5°C since the variation in the actual factors across this range is insignificant.

| EVAPORATOR TEMPERATURE °C | PRESSURE DROP ACROSS TEV (bar) | | | | | | | |
|--------------------------------------------|--------------------------------|------|------|------|------|------|------|------|
| | 2 | 4 | 6 | 8 | 10 | 12 | 14 | 16 |
| CORRECTION FACTOR, CF PRESSURE DROP | | | | | | | | |
| 5° | 0.58 | 0.82 | 1.00 | 1.15 | 1.29 | 1.41 | 1.53 | 1.63 |
| -5° & -15° | 0.50 | 0.71 | 0.87 | 1.00 | 1.12 | 1.22 | 1.32 | 1.41 |
| -20° & -30° | 0.45 | 0.63 | 0.77 | 0.89 | 1.00 | 1.10 | 1.18 | 1.26 |
| -40° | 0.41 | 0.58 | 0.71 | 0.82 | 0.91 | 1.00 | 1.08 | 1.15 |

TEV Capacity = TEV Rating x CF Liquid Temperature x CF Pressure Drop — Example:
Actual capacity of a nominal 1-1/2 ton R-404A Type FB valve at -5°C evaporator, 10 bar pressure drop across the TEV, and a 30°C liquid temperature entering the TEV = 4.91 (from rating chart) x 1.21 (CF liquid temperature) x 1.12 (CF pressure drop) = 6.65 kW.

| REFRIGERANT | LIQUID TEMPERATURE ENTERING TEV °C | | | | |
|-------------|------------------------------------------|------|------|------|------|
| | 20° | 30° | 40° | 50° | 60° |
| | CORRECTION FACTOR, CF LIQUID TEMPERATURE | | | | |
| 410A | 1.30 | 1.15 | 1.00 | 0.84 | 0.65 |

These factors include corrections for liquid refrigerant density and net refrigerating effect and are based on an evaporator temperature of -15°C. However, they may be used for any evaporator temperature from -15°C to 5°C since the variation in the actual factors across this range is insignificant.

| EVAPORATOR TEMPERATURE °C | PRESSURE DROP ACROSS TEV (bar) | | | | |
|---------------------------------|-------------------------------------|------|------|------|------|
| | 8 | 11 | 14 | 17 | 20 |
| | CORRECTION FACTOR, CF PRESSURE DROP | | | | |
| 5° | 0.85 | 1.00 | 1.13 | 1.24 | 1.35 |
| -5° & -15° | 0.76 | 0.89 | 1.00 | 1.10 | 1.20 |

TEV Capacity = TEV Rating x CF Liquid Temperature x CF Pressure Drop — Example:
Actual capacity of a nominal 4 ton R-410A Type RC valve at -15°C evaporator, 17 bar pressure drop across the TEV, and a 30°C liquid temperature entering the TEV = 17.3 (from rating chart) x 1.15 (CF liquid temperature) x 1.10 (CF pressure drop) = 21.9 kW.
